Representative Farms Economic Outlook for the August 2005 FAPRI/AFPC Baseline

AFPC Working Paper 05-3

September 2005

A policy working paper is designed to provide economic research on a timely basis. It is an interim product of a larger AFPC research project which will eventually be published as a policy research report. These results are published at this time because they are believed to contain relevant information to the resolution of current policy issues. AFPC welcomes comments and discussions of these results and their implications.

Executive Summary

The Agricultural and Food Policy Center (AFPC) at Texas A&M University develops and maintains data to simulate 100 representative crop and livestock operations in major production areas in 28 states. The chief purpose of this analysis is to project those farms' economic viability for 2005 through 2009. The data necessary to simulate the economic activity of these operations is developed through ongoing cooperation with panels of agricultural producers in each of these states. The Food and Agricultural Policy Research Institute (FAPRI) provided projected prices, policy variables, and input inflation rates in their August 2005 Baseline.

Under the August 2005 Baseline, 21 of the 64 crop farms are considered in good liquidity condition (less than a 25 percent chance of negative ending cash during 2005-2009). Seven crop farms have between a 25 percent and a 50 percent likelihood of negative ending cash. The remaining 36 crop farms have greater than a 50 percent of negative ending cash. Additionally, 21 of the 64 crop farms are considered in good equity position (less than a 25 percent chance of decreasing real net worth during 2005-2009). Six crop farms have between a 25 percent and 50 percent likelihood of losing real net worth, and 37 crop farms have greater than a 50 percent probability of decreasing real net worth.

- **FEEDGRAIN FARMS:** Eight of the 18 feedgrain farms are in good overall financial condition. One can be considered to be in marginal condition, and nine are in poor condition.
- **WHEAT FARMS:** Nine of the 13 wheat farms are classified in good financial condition, one is marginal, and three are in poor condition.
- **COTTON FARMS:** One (TNC1900) of the 18 cotton farms is classified in good condition, four are in moderate condition, and 13 are in poor condition. Also, 14 of these farms have more than a 50 percent chance of losing real net worth by 2009.
- **RICE FARMS:** Two of the 15 rice farms are in good condition, one is classified in marginal condition, and 12 farms are projected to be in poor financial condition through 2009.
- **DAIRY FARMS:** Fourteen of the 23 dairy farms are in good overall financial condition. Three are considered to be in marginal condition, and six are in poor condition.
- **BEEF CATTLE RANCHES:** Six of the 13 cattle ranches are classified in good financial condition, five are classified in marginal condition, and two are in poor condition.

The August 2005 Baseline has more farms in poor overall financial condition than previous baselines. The most important factor that contributes to the poor financial performance of the farms is the large increase in energy prices. Fuel costs, previously projected to decrease modestly in 2005 and 2006, are now projected to increase significantly on top of the increase experienced in 2003 and 2004. The increase in cost is not limited to fuel expense for trucks, equipment, and irrigation motors, but includes the cost of nitrogen fertilizer and ag-related services which are closely linked to energy prices. These prices have also increased significantly. The steady rise in energy related costs is particularly evident in farms with input-intensive crops and large amounts of irrigated crop land.

REPRESENTATIVE FARMS ECONOMIC OUTLOOK FOR THE AUGUST 2005 FAPRI/AFPC BASELINE

The farm level economic impacts of the Farm Security and Rural Investment Act of 2002 (2002 Farm Bill) on representative crop and livestock operations are projected in this report. The analysis was conducted over the 2002-2009 planning horizon using FLIPSIM, AFPC's whole farm simulation model. Data to simulate farming and ranching operations in the nation's major production regions came from two sources:

- Producer panel cooperation to develop economic information to describe and simulate representative crop, livestock, and dairy farms.
- Projected prices, policy variables, and input inflation rates from the Food and Agricultural Policy Research Institute (FAPRI) August 2005 Baseline.

The primary objective of the analysis is to determine the farms' economic viability by region and commodity through the life of the 2002 Farm Bill.

The FLIPSIM policy simulation model incorporates the historical risk faced by farmers and ranchers for prices and production. This report presents the results of the August 2005 Baseline in a risk context using selected simulated probabilities and ranges for annual net cash farm income values. The probability of a farm experiencing a negative ending cash balance and the probability of a farm losing real net worth are included as indicators of the cash flow and equity risks facing farms through the year 2009.

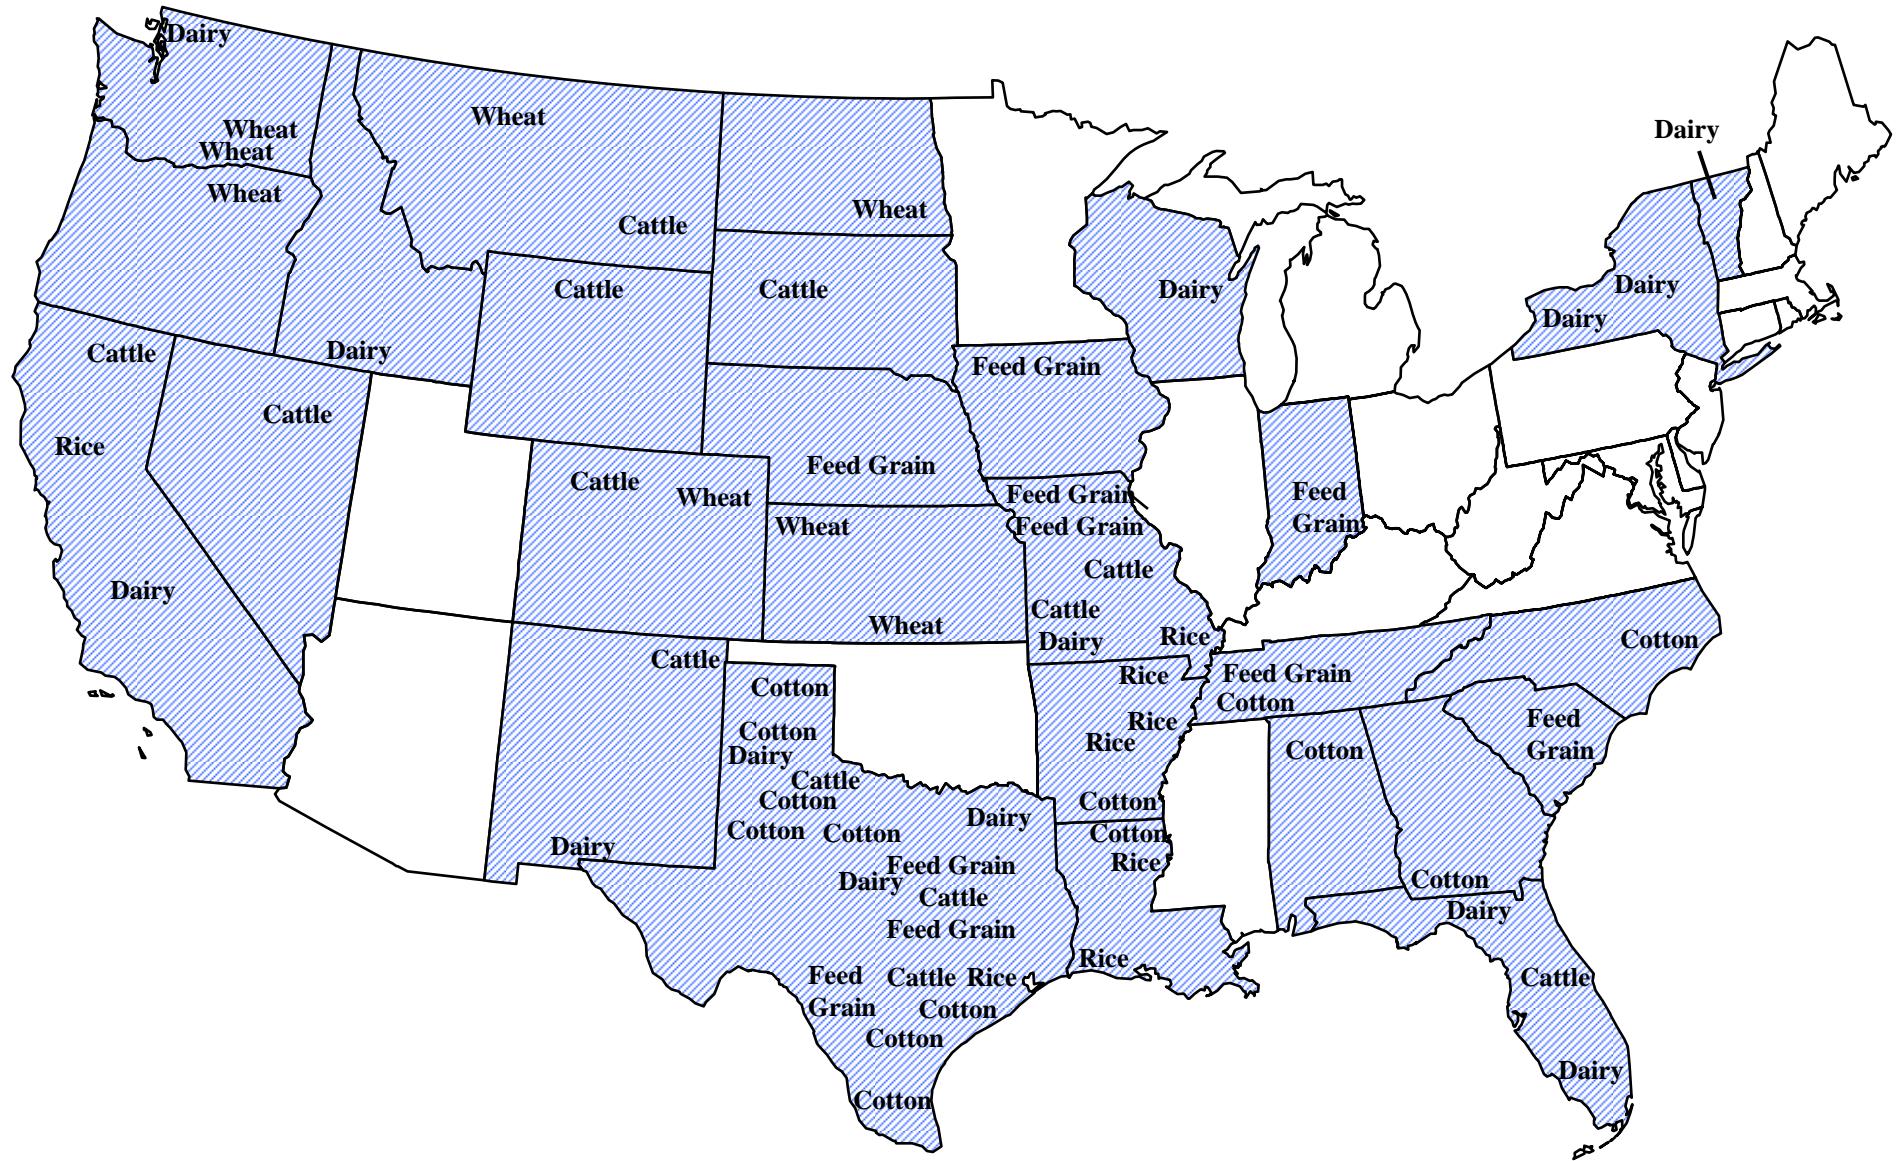

This report is organized into ten sections. The first section summarizes the process used to develop the representative farms and the key assumptions utilized for the farm level analysis. The second section summarizes the FAPRI August 2005 Baseline and the policy and price assumptions used for the representative farm analyses. The third through sixth sections present the results of the simulation analyses for feed grain, wheat, cotton, and rice farms. The seventh and eighth sections summarize simulation results for dairy and cattle. Two appendices constitute the final section of the report. Appendix A provides tables to summarize the physical and financial characteristics for each of the representative farms. Appendix B provides the names of producers, land grant faculty, and industry leaders who cooperated in the panel interview process to develop the representative farms.

Panel Process

AFPC has developed and maintains data to simulate 100 representative crop and livestock farms chosen from major production areas across the United States (Figure 1). Characteristics for each of the farms in terms of location, size, crop mix, assets, and average receipts are summarized in Appendix A. The locations of these farms are primarily the results of discussions with staffers for the U.S. House and Senate Agriculture Committees. Information necessary to simulate the economic activity on these representative farms is developed from panels of producers using a consensus-building interview process. Normally two farms are developed in each region using separate panels of producers: one is representative of moderate size full-time farm operations, and the second panel usually represents farms two to three times larger.

The data collected from the panel farms are analyzed in the whole farm simulation model (FLIPSIM) developed by AFPC. The producer panels are provided pro-forma financial statements for their representative farm and are asked to verify the accuracy of simulated results for the past year and the reasonableness of a five-year projection. Each panel must approve the model's ability to reasonably reflect the economic activity on their representative farm prior to using the farm for policy analyses.

Figure 1. Representative Farms and Ranches

Most farms used in the analysis have been updated with the panels since November 2001. All of the crop farms are assumed to begin 2002 with 20 percent intermediate-term and long-term debt, based on information provided by ERS-USDA and the panel members. Initial debt levels in 2002 for dairy farms were set at 30 percent and initial debt levels for beef cattle ranches were 1 percent for land and 25 percent for cattle and machinery. The debt levels the farms have at the outset of 2002 are based on a stratified tabulation of USDA's Farm Cost and Returns Survey for 2000, using the survey data for moderate to large size farms in states where AFPC has representative farms.

Key Assumptions

- All farms classified as moderate scale are the size (acres or number of livestock) considered to be representative of a majority of full-time commercial farming operations in the study area. In many regions a second farm two to three times larger than the moderate scale farm is developed as an indicator of size economies.
- Dairy and cattle herd sizes are held constant for all farms over the 2002-2009 planning horizon.
- The farms were structured so government payment limits were not effective at reducing direct, counter-cyclical, and loan deficiency payments.
- Minimum family living withdrawals were assumed to be the higher of 10 percent of gross receipts or \$20,000 annually. Actual family living withdrawals are determined by historical consumption patterns. Therefore, as the farm's profitability increases so does the level of family living withdrawals.
- The farm is subject to owner/operator federal (income and self-employment) and state income taxes as a sole proprietor, based on the current income tax provisions.
- No off-farm-related income, including family employment, was included in the analyses. Therefore, the farm reflects only the ability of the farm to provide for family living and capital replacement.
- Farm program parameters, average annual prices, crop and livestock yield trends, interest rates, and input cost inflation (deflation) are based on the August 2005 FAPRI Baseline which assumes continuation of the 2002 Farm Bill through 2009.
- Direct payments for participating cotton, wheat, feed grain, oilseed, and rice producers are made based on 85 percent of their historical base acreage times direct payment yield times a direct payment rate. The direct payment rate is included in the August 2005 FAPRI Baseline.
- Marketing loan provisions for cotton, rice, wheat, feed grains, soybeans, sunflowers, and dry peas were authorized in the 2002 Farm Bill and are assumed to be in place for the farm level analysis.
- Counter-cyclical payments are triggered by marketing year prices included in the August 2005 FAPRI Baseline.
- The farm level simulation model incorporates price and yield risk faced by farmers. Historical yield variability for crops and production for livestock (sale weights, birth rates, and milk per cow) over the past ten years are assumed to prevail for the planning horizon. Random crop, livestock and milk prices are simulated using the August 2005 Baseline by FAPRI as the forecast of average prices. Prices reflect national price volatility caused by international production and demand as well as U.S. production risk.

- Historical crop yields (2002-2004) were held constant based on actual values obtained from the producers. Crop yields for 2005-2009 were simulated stochastically based on the average yields provided by the producers and the historical yield variability for the farm. Prices were held constant at producer-provided values for 2002-2004. FAPRI's August 2005 Baseline prices were localized for the farms and used as the average prices for 2005-2009 to simulate stochastic crop and livestock prices.
- The milk support price remains at \$9.90/cwt. through 2009.
- Disaster payments (Livestock Compensation Program) to livestock producers in 2002 or 2003 have been incorporated.
- Actual average loan deficiency payment (LDP) rates in the counties where the representative farms are located are used for 2002 through 2004.
- All crop farms except rice are assumed to carry Multi-Peril Crop Insurance (MPCI) at the 65/100 level.

New and Updated Farms and Ranches Since the January 2005 Baseline Update

Since publication of the January 2005 AFPC Representative Farms Baseline Update, two new representative farms have been added to the national farm set:

ORW4000 A 4,000-acre farm employing a wheat-fallow rotation located in northeastern Oregon.
 WAAW3500 A 3,500-acre wheat-fallow farm located in south central Washington.

Since publication of the January 2005 AFPC Representative Farms Baseline Update, the following 20 representative farms and ranches have been updated:

TXHG2000	No change in size. Corn acres increased; cotton and sorghum acres decreased.
TXWG1400	No change in size. Cotton acres increased; sorghum and wheat acres decreased.
WAW1725	No change in size. Shifted acres from barley to wheat.
WAW5000	Increased acreage from 4,675 to 5,000. Shifted acres from barley to wheat.
TXNP3000	Increased acreage from 1,750 to 3,000. Formerly a feedgrain farm, this farm added significant cotton acreage at the expense of corn and wheat, reflective of regional trends.
TXNP7000	No change in size. Formerly a feedgrain farm, this farm added significant cotton acreage at the expense of corn, sorghum, and wheat, reflective of regional trends.
TXSP2239	No change in size. Shifted acres from peanuts to cotton.
TXSP3745	No change in size. Shifted acres from peanuts to cotton.
LAC2640	No change in size.
TXR1350	Decreased acreage from 1,553 to 1,350. Acres of rice and ratoon rice remained the same.
TXR2400	Decreased acreage from 3,774 to 2,400. Acres of rice and ratoon rice decreased.
TXER3200	No change in size. Percentage of ratoon crop rice decreased from 80 to 75 percent.
LASR1200	No change in size. Soybean acres decreased.
LANR2500	No change in size.
MOWR4000	No change in size.
MSR4735	Removed from representative farm set.
TXCD550	Increased milking herd by 50 cows.
TXCD1300	No change in size.
WAD250	No change in size.
WAD850	No change in size.
FLSD1500	No change in size.
NMB240	Added 200 head of summer stockers.

FAPRI August 2005 Baseline

Projected crop prices for FAPRI's August 2005 Baseline are summarized in Table 1. Corn prices start at a high of \$2.42/bu. in 2003, decrease in 2005 to \$2.04/bu, and then increase marginally until they reach \$2.31/bu. by 2009. Wheat prices are expected to range between \$3.09/bu and \$3.47/bu between 2004 and 2009, strengthening after 2005. Cotton prices decreased dramatically in 2004 to \$0.428/lb. from a 2003 high of \$0.618/lb. From 2004 levels, cotton prices are projected to increase gradually to \$0.5224/lb. in 2009. Rice prices rose to \$8.08/cwt. in 2003, reaching a recent high, and then declined slightly in 2004 to \$7.30/cwt. Rice prices are projected to increase gradually from \$7.31/cwt. in 2005 to \$7.40/cwt. in 2009.

Assumed loan rates and direct payment rates are reported in Table 1. The annual direct payment rates for 2002-2007 reflect the increase in these payment rates authorized in the 2002 Farm Bill. All payment rates are assumed to hold at 2007 levels for 2008 and 2009.

Projected livestock prices for FAPRI's August 2005 Baseline are presented in Table 2. Cattle prices are projected to increase from 2003 to 2004 and decline in 2005-2009. Feeder cattle prices are projected to increase from \$111.79/cwt in 2004 to \$115.14/cwt in 2005, then decrease to \$91.89/cwt by 2009. Annual milk prices for the 10 states where representative dairy farms are located are summarized in Table 2. The U.S. all milk price is expected to decrease from \$16.13/cwt in 2004 to \$15.02/cwt in 2005 and to \$13.72/cwt in 2006. After 2006, milk prices are projected to stay in the \$13.00/cwt to \$13.50/cwt range through 2009.

Projected annual rates of change for variable cash expenses are summarized in Table 3. The rate of change in input prices come from FAPRI's August 2005 Baseline. Annual interest rates from Global Insight (formerly DRI) paid for intermediate-term and long-term loans and earned for savings are also reported in Table 3. Assumed annual rates of change in land values over the 2005-2009 period are provided by the FAPRI Baseline and are projected to range between a 0.07% and a 3.28% per year increase in nominal land values from 2006 through 2009 (Table 3).

Definitions of Variables in the Summary Tables

- **Overall Financial Position, 2005-2009** -- As a means of summarizing the representative farms' economic efficiency, liquidity, and solvency position, AFPC classifies each farm as being in either a good, marginal or poor position. AFPC assumes a farm is in a good financial position when it has less than a 25 percent chance of a negative ending cash balance and a less than 25 percent chance of losing real net worth. If the probabilities of these events are between 25 and 50 percent the farm is classified as marginal. A probability greater than 50 percent places the farm in a poor financial position.
- **Change in Real Net Worth, 2005-2009** -- Annualized percentage change in the operator's net worth from January 1, 2005 through December 31, 2009, after adjusting for inflation. This value reflects the real annualized increase or decrease in net worth or equity for the farm over the planning horizon including changes in real estate values.
- **Net Income Adjustment (NIA) to Maintain Real Net Worth, 2005-2009** -- NIA is the annual change in net cash farm income necessary to insure the farm maintains its real net worth during 2005-2009. A positive NIA indicates the additional annual net income needed to maintain real net worth. A negative NIA indicates the annual loss in net income the farm can endure and still maintain real net worth.
- **Net Income Adjustment (NIA) for Zero Ending Cash Balance in 2009** -- NIA is the loss in annual net cash farm income a farm can withstand and have a zero ending cash balance in 2009. A positive NIA indicates the annual increase in receipts necessary for a zero ending cash balance, while a negative NIA indicates the annual decrease in receipts that results in a zero ending cash balance.
- **Government Payments/Receipts, 2005-2009** -- Sum of all farm program payments (CCP, direct, and loan deficiency payments) divided by total receipts received from the market plus CCP, direct, and loan deficiency payments, crop insurance indemnities, and other farm related receipts.
- **Total Cash Receipts** -- Sum of annual cash receipts from all sources, including market sales, CCP, and direct payments, loan deficiency payments, crop insurance indemnities, and other farm related receipts.
- **Government Payments** -- Sum of annual counter cyclical payments, direct payments, and marketing loan gains/LDP for crops and the MILC program payment for dairy farms. Also included are lump sum disaster payments for livestock.
- **Net Cash Farm Income** -- Equals total cash receipts minus all cash expenses. Net cash farm income is used to pay family living expenses, principal payments, income taxes, self employment taxes, and machinery replacement costs. The values in the tables are the averages for each year in the planning horizon.
- **Probability of Negative Ending Cash Balance** -- Is the number of times out of 100 that the farm's ending cash reserves before borrowing are less than zero. This probability is reported for each year to indicate how the cash flow risk for the farm changes over the planning horizon.
- **Ending Cash Reserves** -- Equals total cash on hand at the end of the year. Ending cash equals beginning cash reserves plus net cash farm income and interest earned on cash reserves less principal payments, federal taxes (income and self employment), state income taxes, family living withdrawals, and actual machinery replacement costs (not depreciation).
- **Nominal Net Worth** -- Equity at the end of each year equals total assets including land minus total debt from all sources. Nominal net worth is not adjusted for inflation and averages are reported for each year in the planning horizon.
- **Probability of Decreasing Real Net Worth Over 2002-2009** -- Is the number of times out of 100 that real net worth at the end of 2009 is less than real net worth at the start of 2002.

APPENDIX A:

CHARACTERISTICS OF

REPRESENTATIVE FARMS

2004 CHARACTERISTICS OF PANEL FARMS PRODUCING FEED GRAINS AND OILSEEDS

- IAG1350** IAG1350 is a 1,350-acre northwestern Iowa (Webster County) grain farm. The farm is moderate-sized for the region and plants 675 acres of corn and 675 acres of soybeans annually. Fifty-nine percent of this farm's 2004 receipts come from corn production.
- IAG2750** This 2,750-acre large-sized grain farm is located in northwestern Iowa (Webster County). It plants 1,375 acres of corn and 1,375 acres of soybeans each year, realizing 58 percent of receipts from corn production.
- IAG4200** A 4,200-acre large-sized grain farm located in northwestern Iowa (Webster County). Annually, 2,100 acres are planted to corn and 2,100 acres are planted to soybeans (of which one half are grown for seed under a production contract). In 2004, 59 percent of the farm's receipts were realized from corn production.
- NEG1960** South central Nebraska (Dawson County) is home to this 1960-acre grain farm. This farm plants eighty-four percent of cultivated acres to corn and 9 percent to soybeans. Alfalfa is grown on the remaining land. The farm produces both yellow and white food-grade corn on 56 percent of the corn acres. Eighty-nine percent of gross receipts are derived from corn sales.
- NEG4300** This is a 4,300-acre grain farm located in south central Nebraska (Dawson County). This operation plants 2,666 acres of corn and 1,118 acres of soybeans each year. Remaining acres are planted to alfalfa. A portion (40 percent) of the corn acreage is food-grade corn. In 2004, 70 percent of total receipts were generated from corn production.
- MOCG1700** MOCG1700 is a 1,700-acre grain farm located in central Missouri (Carroll County) and plants 825 acres of corn, 825 acres of soybeans, and 50 acres of wheat annually. This farm is located in the Missouri River bottom, an area with a large concentration of livestock production. This proximity allows grain producers in this area to supply feed to livestock producers at a premium to other areas of Missouri. This farm generated 62 percent of its total revenue from corn and 37 percent from soybeans during 2004.
- MOCG3630** A 3,630-acre central Missouri (Carroll County) grain farm with 1,650 acres of corn, 1,880 acres of soybeans, and 100 acres of wheat. This farm is located in the Missouri River bottom, an area with a large concentration of livestock production. This proximity allows area grain producers to supply feed to livestock producers at a premium to other areas of Missouri. Corn sales accounted for 59 percent of farm receipts and soybeans accounted for 40 percent in 2004.
- MONG1850** MONG1850 is a 1,850-acre diversified northwest Missouri grain farm centered in Nodaway County. MONG1850 plants 900 acres of corn, 900 acres of soybeans, and 200 acres of hay annually. The farm also has a 200-head cow-calf herd. Proximity to the Missouri River increases marketing options for area grain farmers due to easily accessible river grain terminals. In 2004, 47 percent of the farm's total receipts were from corn, 31 percent from soybeans, and 21 percent from cattle sales.
- ING1000** Shelby County, Indiana, is home to this 1,000-acre moderate-sized feedgrain farm. This farm annually plants corn and soybeans in a 50/50 rotation. Due to this farm's proximity to Indianapolis, land development pressures will likely constrain further expansion of this farm's operations. Fifty-seven percent of 2004 receipts came from corn sales.
- ING2200** ING2200 is a large-sized grain farm located in east central Indiana (Shelby County). This farm plants 1,100 acres to corn and 1,100 acres to soybeans each year. In 2004, 58 percent of gross receipts were generated by corn sales.

Appendix Table A1. Characteristics of Panel Farms Producing Feed Grains.

*Receipts for 2004 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

**Acreages for 2004 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2004 PANEL FARMS PRODUCING FEED GRAINS AND OILSEEDS (CONTINUED)

- TXPG3760** TXPG3760 is a predominately irrigated farm located in the Texas Panhandle (Castro County). Annually, 1,344 acres are planted to corn and 1,472 acres are planted to cotton. In 2004, 51 percent of cash receipts were generated from corn sales.
- TXHG2000** This 2,000-acre grain farm is located on the Blackland Prairie of Texas (Hill County). On this farm, 1,000 acres of corn, 500 acres of sorghum, 250 acres of cotton, and 250 acres of wheat are planted annually. Feedgrain sales accounted for 60 percent of 2004 receipts with cotton accounting for 29 percent of sales. Forty beef cows live on 300 acres of improved pasture and contribute approximately five percent of total receipts.
- TXWG1400** This 1,400-acre farm is located on the Blackland Prairie of Texas (Williamson County). TXWG1400 plants 900 acres of corn, 200 acres of sorghum, 250 acres of cotton, and 50 acres of winter wheat annually. Additionally, this farm has a 50-head beef cow herd that is pastured on rented ground that cannot be farmed. Feedgrain sales accounted for 54 percent of 2004 receipts with cotton accounting for 37 percent of sales.
- TXUG1200** TXUG1200 is a grain farm located in Uvalde County, Texas. This farm plants 450 acres of corn, 200 acres of grain sorghum, 400 acres of cotton, and 150 acres of wheat each year. All crops except wheat are grown under irrigation. In 2004, feedgrain sales accounted for 37 percent of farm receipts with cotton accounting for 61 percent of the total.
- TNG900** This is a 900-acre, moderate-sized grain farm in West Tennessee (Henry County). Annually, this farm plants 500 acres of corn, 400 acres of soybeans, and 100 acres of wheat (planted before soybeans) in a region of Tennessee recognized for the high level of implementation of conservation practices by farmers. Sixty-five percent of 2004 farm receipts were from sales of corn.
- TNG2750** West Tennessee (Henry County) is home to this 2,750-acre, large-sized grain farm. Farmers in this part of Tennessee are known for their early and continued adoption of conservation practices, including widespread implementation of no-till farming. TNG2400 plants 1,100 acres of corn, 550 acres of wheat, and 1,650 acres of soybeans (550 of which are double-cropped after wheat). The farm generated 44 percent of its 2004 gross receipts from sales of corn and 43 percent from soybeans.
- SCG1500** SCG1500 is a moderate-sized, 1500-acre grain farm in South Carolina (Clarendon County) consisting of 698 acres of dryland corn, 148 acres of irrigated corn, 654 acres of soybeans (454 acres double-cropped after wheat), and 454 acres of wheat. Forty-seven percent of the farm's receipts were realized from corn sales during 2004. This farm enjoys significant returns on double-cropped acreage, but timing does not allow for more than 454 acres.
- SCG3500** A 3,500-acre, large-sized South Carolina (Clarendon County) grain farm with 1,840 acres of corn, 900 acres of wheat, 1,260 acres of soybeans (900 double-cropped after wheat), and 400 acres of cotton. The farm generated 44 percent of 2004 receipts from corn sales and 20 percent from soybean sales, with an additional 23 percent coming from cotton sales. Timing precludes further expansion of relatively lucrative double-cropped acres.

2004 CHARACTERISTICS OF PANEL FARMS PRODUCING WHEAT

- WAW1725** This is a 1,725-acre moderate-sized grain farm in the Palouse of southeastern Washington (Whitman County). It plants 1,121 acres of wheat, 173 acres of barley, and 431 acres of dry peas. Disease concerns dictate rotating a minimum acreage of barley and peas to maintain wheat yields. This farm generated 76 percent of 2004 receipts from wheat.
- WAW4675** A 4,675-acre, large-sized grain farm in the Palouse of southeastern Washington (Whitman County). Annually, this farm allocates 2,915 acres to wheat, 233 acres to barley, and 1,293 acres to dry peas. Diseases that inhibit wheat yield dictate the rotation of a minimum acreage of barley and peas. Wheat sales accounted for 78 percent of 2004 receipts.
- WAAW3500** South central Washington (Adams County) is home to this 3.500-acre, large-sized grain farm. Annually, this farm plants 1,500 acres of wheat in a wheat-fallow rotation. Additionally, 500 acres are enrolled in a CRP contract. In 2004, wheat sales accounted for 93 percent of the farm's gross receipts.
- ORW4000** A 4,000-acre large-sized grain farm located in northeastern Oregon (Morrow County). This farm plants 1,600 acres annually in a wheat-fallow rotation, with 400 additional acres enrolled in a CRP contract. Ninety-two percent of this farm's 2004 total receipts came from wheat sales.
- MTW4500** North-central Montana (Chouteau County) is home to this 4,500 acre farm on which 2,475 acres of wheat (1,856 acres of winter wheat, 619 acres of spring wheat) are planted each year. In 2004, 98 percent of cash income came from wheat.
- NDW2180** NDW2180 is a 2,180-acre, moderate-sized, south central North Dakota (Barnes County) grain farm that plants 700 acres of wheat, 240 acres of corn, 100 acres of barley, 800 acres of soybeans, and 240 acres of sunflowers. The farm generated 34 percent of 2004 receipts from small grains sales (wheat and barley) and about 52 percent from oilseeds.
- NDW6250** This is a 6,250-acre, large-sized grain farm in south central North Dakota (Barnes County) that grows 2,700 acres of wheat, 300 acres of barley, 1,600 acres of soybeans, 600 acres of corn, 500 acres of sunflowers, and 300 acres of dry edible beans annually. Small grains (wheat and barley) sales total 43 percent of 2004 receipts with oilseeds (soybeans and sunflowers) making up 39 percent.

*Receipts for 2004 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

**Acreages for 2004 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2004 CHARACTERISTICS OF PANEL FARMS PRODUCING WHEAT (CONTINUED)

- KSCW1385** South central Kansas (Sumner County) is home to this 1,385-acre, moderate-sized grain farm. KSCW1385 plants 928 acres of winter wheat, 319 acres of sorghum, and 138 acres of soybeans each year. For 2004, 69 percent of gross receipts came from wheat.
- KSCW4000** A 4,000-acre, large-sized grain farm in south central Kansas (Sumner County) that plants 2,845 acres of winter wheat, 975 acres of sorghum, 50 acres of corn, 55 acres of soybeans, and 75 acres of hay. KSCW4000 also runs 67 head of beef cows. Sixty-nine percent of this farm's 2004 total receipts were generated from sales of winter wheat.
- KSNW2800** This is a 2,800-acre, moderate-sized northwest Kansas (Thomas County) grain farm. This farm plants 935 acres of winter wheat (wheat-fallow rotation), 470 acres of corn, 280 acres of sorghum, and 185 acres of sunflowers. KSNW2800 also owns 60 head of beef cows. This farm generated 39 percent of 2004 receipts from wheat and 40 percent of its receipts from feedgrains.
- KSNW4300** KSNW4300 is a 4,300-acre, large-sized northwest Kansas (Thomas County) grain farm that annually plants 2,000 acres of winter wheat, 532 acres of corn, 281 acres of sorghum, 282 acres of sunflowers, 130 acres of soybeans, 75 acres of hay, and has 1,000 acres that lie fallow. This farm also runs 100 head of beef cows. The farm generated 44 percent of receipts from wheat, 35 percent from feedgrains, and eight percent from cattle during 2004.
- COW3000** A 3,000-acre northeast Colorado (Washington County), moderate-sized grain farm that plants 970 acres of winter wheat, 605 acres of millet, and 600 acres of corn each year. COW3000 has adopted minimum tillage practices on most of its acres. This farm generated 39 percent of its receipts from wheat, 24 percent from millet, and 30 percent from corn.
- COW5640** A 5,640-acre, large-sized northeast Colorado (Washington County) grain farm. It plants 1,900 acres of wheat, 1,100 acres of millet, 650 acres of corn, and 260 acres of sunflowers. During 2004, 51 percent of gross receipts came from wheat sales and 20 percent came from millet sales.

2004 CHARACTERISTICS OF PANEL FARMS PRODUCING COTTON

- TXNP3000** This is a 3,000-acre cotton farm located on the northern High Plains of Texas (Moore County). This farm plants 1,500 acres of cotton (1,200 irrigated and 300 dryland), 360 acres of irrigated corn, 240 acres of irrigated sorghum for seed production, and 600 acres of irrigated wheat annually. Fifty-two percent of total receipts are generated from cotton sales.
- TXNP7000** TXNP7000 is a large-sized cotton farm located in the northern Texas Panhandle (Moore County). This farm annually plants 2,850 acres of irrigated cotton, 1,100 acres of irrigated corn, 796 acres of sorghum (516 acres of dryland and 280 acres of irrigated production for seed), and 1,237 acres of winter wheat (720 acres irrigated and 517 acres dryland). Forty-eight percent of 2004 cash receipts were derived from cotton sales.
- TXSP2239** A 2,239-acre Texas South Plains (Dawson County) cotton farm that is moderate-sized for the area. TXSP2239 plants 1,800 acres of cotton (1,434 dryland, 366 irrigated), 60 acres of peanuts, and has 183 acres in CRP. For 2004, 91 percent of receipts came from cotton.
- TXSP3745** The Texas South Plains (Dawson County) is home to this 3,745-acre, large-sized cotton farm that grows 3,036 acres of cotton (2,406 dryland, 630 irrigated), 120 acres of peanuts, and has 288 acres in CRP. Cotton sales comprised 90 percent of 2004 receipts.
- TXPC2500** The Texas Panhandle is home to this 2,500-acre farm (Deaf Smith County). Annually, cotton is planted on 1,184 acres (1,000 irrigated and 184 dryland), 308 acres to sorghum (125 irrigated and 183 dryland), 883 acres planted to wheat (700 irrigated and 183 dryland), and 125 irrigated acres are planted to corn. Sixty-three percent of 2004 cash receipts were generated by cotton sales.
- TXEC5000** This 5,000-acre farm is located on the Eastern Caprock of the Texas South Plains (Crosby County). Annually, 4,300 acres are planted to cotton (2,800 irrigated and 1,500 dryland), 400 acres of wheat (100 irrigated and 300 dryland), and 300 acres of dryland sorghum. In 2004, cotton sales accounted for 96 percent of gross receipts.
- TXRP2500** TXRP2500 is a 2,500-acre cotton farm located in the Rolling Plains of Texas (Jones County). This farm plants 1,122 acres of cotton and 825 acres of winter wheat each year. Eighty-one percent of 2004 farm receipts came from cotton sales. Twelve head of beef cows generated approximately two percent of farm receipts.
- TXMC3500** A 3,500-acre cotton farm located on the middle Texas Gulf Coast (Jackson County) that farms 1,750 acres of cotton and 875 acres each of sorghum and corn. In 2004, cotton sales comprised 71 percent of total cash receipts on this operation.
- TXCB1850** A 1,850-acre cotton farm located on the Texas Coastal Bend (San Patricio County) that farms 925 acres of cotton, 775 acres of sorghum, and 150 acres of corn annually. Seventy-four percent of 2004 cash receipts were generated by cotton.
- TXCB5500** Nueces County, Texas is home to this 5,500-acre farm. Annually, 2,750 acres are planted to cotton and 2,750 acres to sorghum. Cotton sales accounted for 77 percent of 2004 receipts.
- TXVC4500** This 4,500-acre farm is located in the lower Rio Grande Valley of Texas (Willacy County) and plants 2,388 acres to cotton (500 irrigated and 1,888 acres dryland), 1,887 acres to sorghum, and 225 acres of sugarcane. In 2004, 74 percent of TXVC4500's cash receipts were generated by cotton sales.

*Receipts for 2004 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

**Acreages for 2004 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2004 CHARACTERISTICS OF PANEL FARMS PRODUCING COTTON (continued)

- LAC2640** This is a 2,640 cotton farm located in north Louisiana (Morehouse Parish). LAC2640 plants 924 acres of cotton, 1,056 acres of corn, and 660 acres of soybeans each year. During 2004, 57 percent of farm receipts were generated from cotton sales.
- ARC6000** ARC5000 is a 5,000-acre cotton farm in northeast Arkansas (Desha County) that plants 2,000 acres of cotton, 2,000 acres of rice, 1,500 acres of soybeans, and 500 acres of sorghum. For 2004, 50 percent of gross receipts came from cotton sales, 32 percent from rice sales, and 14 percent from soybean sales.
- TNC1900** A 1,900-acre, moderate-sized West Tennessee (Fayette County) cotton farm. TNC1900 consists of 990 acres of cotton, 440 acres each of soybeans and corn, and 30 acres enrolled in CRP. Cotton accounted for 73 percent of 2004 gross receipts, with corn and soybeans contributing 16 percent and 11 percent, respectively.
- TNC4050** TNC4050 is a 4,050-acre, large-sized West Tennessee (Haywood County) cotton farm. This farm plants 2,670 acres of cotton, 820 acres of soybeans, 560 acres of corn, and 328 acres of wheat each year. During 2004, cotton sales generated 79 percent of gross receipts.
- ALC3000** A 3,000-acre cotton farm located in north central Alabama (Lawrence County) that plants 2,100 acres to cotton, 750 acres to corn, and 150 acres to soybeans annually. ALC3000 has been under a no-till regime for several years. Additionally, cotton produced on this farm is marketed through a cooperative gin. This gin has implemented ginning and marketing innovations that return a higher lint price than would be realized through conventional marketing channels. Cotton sales accounted for 84 percent of total farm receipts during 2004.
- GAC1700** Southwest Georgia (Decatur County) is home to a 1,700-acre cotton farm that plants 1,020 acres to cotton, 510 acres to peanuts, and 170 acres to soybeans. This farm was added during 2001 to represent resurgent cotton production in the Deep South. In 2004, farm receipts were comprised largely of cotton sales (57 percent) and peanut sales (36 percent).
- NCC1100** This is a 1,100-acre cotton farm located on the upper coastal plain of North Carolina (Wayne County). NCC1100 plants 700 acres of cotton, 110 acres of wheat, and 400 acres of soybeans (110 acres of which are double-cropped) annually. This farm was added during 2001 to reflect the return of large-scale cotton production to North Carolina. Cotton accounted for 75 percent of this farm's 2004 receipts with 13 percent coming from soybean sales.

2004 CHARACTERISTICS OF PANEL FARMS PRODUCING RICE

- CAR550** CAR550 is a 550-acre moderate-sized rice farm in the Sacramento Valley of California (Sutter and Yuba Counties) that plants 500 acres of rice annually. This farm generated 86 percent of 2004 gross receipts from rice sales.
- CAR2365** This is a 2,365-acre rice farm located in the Sacramento Valley of California (Sutter and Yuba Counties) that is large-sized for the region. CAR2365 plants 2,240 acres of rice annually. Ninety-five percent of 2004's total receipts were generated from rice sales.
- CABR1100** The Sacramento Valley (Butte County) is home to CABR1100, a 1,100-acre rice farm. CABR1100 harvests 1,000 acres of rice annually, generating 97 percent of 2004 farm receipts from rice sales.
- CACR715** CACR715 is a 715-acre rice farm located in the Sacramento Valley of California (Colusa County). This farm harvests 650 acres of rice each year. During 2004, 97 percent of farm receipts were realized from rice sales.
- TXR1350** This 1,350-acre rice farm located west of Houston, Texas (Colorado County) is moderate-sized for the region. TXR1350 harvests 450 acres of first-crop rice and 405 acres of ratoon rice. The farm generated 97 percent of its receipts from rice during 2004.
- TXR2400** TXR2400 is a 2,400-acre, large-sized rice farm located west of Houston, Texas (Colorado County). This farm harvests 1,200 acres of first-crop rice and 1,080 acres of ratoon rice annually. TXR2400 realized 99 percent of 2004 gross receipts from rice sales.
- TXBR1800** The Texas Gulf Coast (Matagorda County) is home to this 1,800-acre rice farm. TXBR1800 harvests 1,200 acres of rice annually (600 acres of first-crop rice and 600 acres of ratoon rice) and realized 100 percent of 2004 farm receipts from rice sales.
- TXER3200** This 3,200-acre rice farm is large for the Texas Gulf Coast (Wharton County). TXER3200 harvests 1,280 acres of first-crop rice and 960 acres of ratoon rice each year. The farm also grows 160 acres each of soybeans and grain sorghum annually. Ninety-four percent of 2004 receipts came from rice sales.

2004 CHARACTERISTICS OF PANEL FARMS PRODUCING RICE (continued)

- LASR1200** A 1,200-acre southwest Louisiana (Acadia, Jeff Davis, and Vermilion parishes) rice farm, LASR1200 is moderate-sized for the area. This farm harvests 660 acres of rice and 250 acres of soybeans. During 2004, 86 percent of gross receipts were generated from rice sales.
- LANR2500** This is a 2,500-acre, large-sized northeast Louisiana (Madison Parish) rice farm. This farm harvests 1,000 acres of rice, 800 acres of soybeans, 325 acres of cotton, and 250 acres of corn. For 2004, 47 percent of farm receipts came from rice, 18 percent from soybeans, and 26 percent from cotton.
- MOER4500** MOER4500 is a 4,500-acre, large-sized rice farm located in southeast Missouri (New Madrid County) that plants 1,500 acres each to rice, corn, and soybeans each year. During 2004, 45 percent of this farm's cash receipts were generated by rice, 34 percent by corn, and 20 percent by soybeans.
- MOWR4000** A 4,000-acre rice farm located in southeast Missouri (Butler County), MOWR4000 is large-sized for the region. Annually, this farm plants 2,000 acres of rice and 2,000 acres of soybeans. Sixty-six percent of receipts for this farm came from rice sales in 2004.
- ARSR3640** ARSR3640 is a 3,640-acre, large-sized Arkansas (Arkansas County) rice farm that harvests 1,620 acres of rice, 1,620 acres of soybeans, and 324 acres of wheat each year. Sixty-one percent of this farm's 2004 receipts came from rice sales.
- ARWR1200** East central Arkansas (Cross County) is home to this 1,200-acre rice farm. Moderate-sized for the region, ARWR1200 annually plants 600 acres to rice, 600 acres to soybeans, and 60 acres of double-cropped wheat. During 2004, rice sales generated 69 percent of gross receipts.
- ARHR3000** ARHR3000 is a 3,000-acre large-sized northeast Arkansas (Lawrence County) rice farm that annually harvests 1,750 acres of rice and 1,250 acres of soybeans. Rice sales accounted for 79 percent of 2004 farm receipts.

**Acreages for 2004 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2004 CHARACTERISTICS OF PANEL FARMS PRODUCING MILK

- CAD1710** A 1,710-cow, large-sized central California (Tulare County) dairy. The farm plants 1,100 acres of hay/silage for which it employs custom harvesting. Milk sales generated 92 percent of 2004 total receipts.
- NMD2125** A 2,125 cow, large-sized southern New Mexico (Dona Ana and Chaves Counties) dairy. This farm purchases all commodities necessary for blending its own total mixed ration and plants no crops. Milk sales accounted for 92 percent of 2004 total receipts.
- WAD250** A 250-cow, moderate-sized northern Washington (Whatcom County) dairy. This farm plants 200 acres of silage and generated 91 percent of its 2004 gross receipts from milk sales.
- WAD850** An 850-cow, large-sized northern Washington (Whatcom County) dairy. This farm plants 605 acres for silage annually. During 2004, 94 percent of this farm's gross receipts came from milk.
- IDD1000** A 1,000-cow, moderate-sized Idaho (Twin Falls County) dairy. This farm plants no crops. Milk sales accounted for 90 percent of IDD1000's gross receipts for 2004.
- IDD3000** A 3,000-cow, large-sized Idaho (Twin Falls County) dairy. This farm plants 2,000 acres for silage annually. Milk sales represent 92 percent of this farm's gross receipts.
- TXND2400** A 2,400-cow, large-sized dairy located in the South Plains of Texas (Bailey County). This farm plants 90 acres of sorghum for silage and 90 acres of wheat (for grazing heifers) annually. Milk sales account for 91 percent of 2004 gross receipts.
- TXCD550** A 550-cow, moderate-sized central Texas (Erath County) dairy. TXCD550 plants 500 acres of hay each year. Milk sales represented 92 percent of this farm's 2004 gross receipts.
- TXCD1300** A 1,300-cow, large-sized central Texas (Erath County) dairy. TXCD1300 plants 400 acres of silage annually. During 2004, milk sales accounted for 92 percent of receipts.

*Receipts for 2004 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

**Acreages for 2004 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2004 CHARACTERISTICS OF PANEL FARMS PRODUCING MILK (CONTINUED)

- TXED550** A 550-cow, moderate-sized northeast Texas (Hopkins County) dairy. This farm has 300 acres of improved pasture and 50 acres of hay. During 2004, milk sales represented 92 percent of annual receipts.
- TXED1000** A 1,000-cow, large-sized northeast Texas (Hopkins County) dairy. This farm plants 750 acres of hay/silage. This farm generated 91 percent of 2004 receipts from milk sales.
- WID145** A 145-cow, moderate-sized eastern Wisconsin (Winnebago County) dairy. The farm plants 237 acres of silage, 60 acres for hay, 184 acres of corn, and 99 acres of soybeans. Milk constituted 91 percent of this farm's 2004 receipts.
- WID775** A 775-cow, large-sized eastern Wisconsin (Winnebago County) dairy. The farm plants 696 acres of hay and 454 acres of silage each year. Milk sales comprised 94 percent of the farm's 2004 receipts.
- NYWD800** An 800-cow, moderate-sized western New York (Wyoming County) dairy. This farm plants 690 acres of silage and 750 acres of haylage annually. Milk sales accounted for 93 percent of the gross receipts for this farm in 2004.
- NYWD1200** A 1,200-cow, large-sized western New York (Wyoming County) dairy. This farm plants 2,160 acres for silage annually. Milk sales accounted for 93 percent of the gross receipts for this farm in 2004.
- NYCD110** A 110-cow, moderate-sized central New York (Cayuga County) dairy. The farm plants 80 acres for hay, 64 acres for corn, and 131 acres for silage annually. Milk accounted for 91 percent of the gross receipts for 2004 on this dairy.
- NYCD500** A 500-cow, large-sized central New York (Cayuga County) dairy. This farm plants 714 acres of hay and haylage and 386 acres of silage. Milk sales make up 93 percent of the 2004 total receipts for this dairy.

2004 CHARACTERISTICS OF PANEL FARMS PRODUCING MILK (CONTINUED)

- VTD134** A 134-cow, moderate-sized Vermont (Washington County) dairy. VTD134 plants 30 acres of hay, and 190 acres of silage annually. Milk accounted for 90 percent of the 2004 receipts for this farm.
- VTD350** A 350-cow, large-sized Vermont (Washington County) dairy. This farm plants 40 acres of hay and 660 acres of silage annually. Milk sales represent 91 percent of VTD350's gross receipts in 2004.
- MOD85** An 85-cow, moderate-sized southwest Missouri (Christian County) dairy. The farm plants 220 acres of hay and 40 acres of silage. Milk accounted for 87 percent of gross farm receipts for 2004.
- MOD400** A 400-cow, large-sized southwest Missouri (Christian County) dairy. The farm plants 315 acres of hay, 135 acres of silage, and 150 acres of improved pasture annually. Milk accounted for 94 percent of gross farm receipts for 2004.
- FLND550** A 550-cow, moderate-sized north Florida (Lafayette County) dairy. The dairy grows 130 acres of hay each year. All other feed requirements are purchased in a pre-mixed ration. Milk sales accounted for 94 percent of the farm receipts.
- FLSD1500** A 1,500-cow, large-sized south central Florida (Okeechobee County) dairy. FLSD1500 plants 500 acres of hay annually. Milk sales represent 95 percent of 2004 total receipts.

2004 CHARACTERISTICS OF PANEL RANCHES PRODUCING BEEF CATTLE

- CAB500** Located in the northern Sacramento Valley (Tehama County, California), this 500-cow operation covers 13,125 acres of deeded and privately owned leased range. Additionally, 2,000 AUMs are leased from the BLM. All 2004 receipts were generated by the cow-calf operation.
- NVB700** NVB700 is a 700-cow ranch located in northeastern Nevada (Elko County). The operation consists of 1,300 acres of owned hay meadow and 8,725 acres of owned range, supplemented by 4,450 AUMs leased from the U.S. Forest Service. Each year, the ranch harvests 1,300 acres of hay. Annually, cattle sales represent all of the ranch's receipts.
- MTB500** A 500-cow ranch located on the eastern plains of Montana (Custer County), MTB500 runs cows on a combination of owned land and land leased from federal, state, and private sources. Federal land satisfies one quarter of total grazing needs. The ranch owns 14,000 acres of pasture. 640 acres of hay are produced annually on the owned land. Sales of high-quality replacement females comprise a significant portion of receipts for this ranch. Also, all deeded acres are leased for hunting. Cattle sales represented 98 percent of this ranch's 2004 receipts.
- WYB500** This 500-cow ranch is located in north central Wyoming (Washakie County). The ranch leases 42 percent of its required grazing acreage from the U.S. Forest Service and owns 1,000 acres of range. Annually, the ranch harvests 300 acres of alfalfa and grass hay on owned ground. In recent years, cowherd size has increased in an effort to realize benefits of economies of size. In 2004, cattle sales accounted for 100 percent of gross receipts on this ranch.
- COB250** This 250-cow ranch is located in northwestern Colorado (Routt County). Federal land provides seven percent of the ranch's grazing needs. The ranch owns 2,300 acres of rangeland, and the cattle graze federal land during the summer. COB250 harvests 450 acres of hay each year. The ranch retains ownership of 75 percent of its steers through the backgrounding stage. Since 1999, the cowherd has decreased by 50 head as land development pressures have reduced grazing capacity. Cattle sales accounted for 76 percent of the ranch's 2004 total receipts.
- NMB240** NMB240 is a 240-cow ranch located in northeastern New Mexico (Union County) that consists of 10,072 owned acres of pastureland. This ranch harvests no hay. All forage and concentrate feed requirements are purchased from outside sources. In 2002, this ranch liquidated 20 percent of its mature cowherd in response to oppressive drought, culling 60 of its 300 cows to arrive at the current inventory. As range conditions have improved, ranchers have not added back cows, opting instead to run summer stockers. Accordingly, 200 summer stocker steers were added to this ranch in 2005. During 2004, 97 percent of gross receipts were derived from cattle sales with the balance of receipts generated from fee hunting.

*Receipts for 2004 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

**Acreages for 2004 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2004 CHARACTERISTICS OF PANEL RANCHES PRODUCING BEEF CATTLE (continued)

- SDB450** SDB450 is a 450-cow West River (Meade County, South Dakota) beef cattle ranch. This operation produces hay and oats on 1,150 acres of owned cropland, and runs its cows on 6,700 acres of owned native range. Grazing needs are supplemented with 2,100 AUMs leased from federal and state sources. In 2004, calf and culled cow/bull sales accounted for 91 percent of gross receipts.
- MOB150** A 150-cow beef cattle operation is the focal point of this diversified livestock and crop farm located in southwest Missouri (Dade County). MOB150 plants 100 acres of corn, 24 acres of sorghum, 58 acres of wheat, 116 acres of soybeans, and 400 acres of hay. During 2004, cattle sales comprised 57 percent of gross receipts and crop sales generated 43 percent.
- MOCB350** MOCB350 is a 350-cow beef cattle farm located in central Missouri (Phelps County). This farm consists of 1,020 acres of owned ground and 500 acres of leased ground. Annually, 560 acres of hay are harvested on owned land. 2004 cattle sales represented 91 percent of MOCB350's cash receipts.
- TXRB500** The western Rolling Plains of Texas (King County) is home to this 500-head cow-calf operation. This ranch operates on 20,000 acres (half owned, half leased) of native range. After weaning, calves are placed on wheat pasture and then either sold as feeder cattle or retained as replacement females. Eighty-six percent of 2004 receipts came from cattle sales.
- TXBB150** TXBB150 runs 150 mother cows and 2,000 stockers annually in the Blackland Prairie of central Texas (McLennan County). The ranch operates on 3,000 acres (400 owned and 2,600 leased) of improved pasture and oat pasture. Additionally, 100 acres of coastal Bermuda hay is harvested for use on the ranch. In 2004, 97 percent of gross receipts were generated by the cow-calf and stocker cattle sales.
- TXSB250** A 250-head cow-calf operation is the central focus of this full-time agricultural operation in south central Texas (Gonzales County). High-intensity best describes the grazing philosophy of the region, with cows deriving most of their forage needs from improved coastal Bermuda pasture. Native pasture serves as fallback pasturage and is host to this operation's fledgling lease hunting program. Contract broiler production is an important source of agricultural revenue for this ranch; even so, cattle sales accounted for 85 percent of 2004 gross receipts.
- FLB1155** This is a 1,155-cow ranch located in central Florida (Osceola County). FLB1155 runs cows on 5,400 acres of owned improved pasture, from which 3,560 acres of hay are harvested annually. Sales of sod are a burgeoning source of agricultural income for area ranches. During 2004, cattle sales represented 90 percent of total receipts.
- OTHERS** Eight other representative farms have beef cattle operations along with their crop production (MONG1850, TXHG2000, TXWG1400, KSCW4000, KSNW2800 KSNW4300, and TXRP2500). These farming operations have from 12 to 200 cows. Cattle contributed from two to 21 percent of gross receipts for these farms in 2004.

Appendix Table A13. Characteristics of Panel Farms Producing Beef Cattle.

	SDB450	MOB150	MOCB350	TXRB500	TXBB150	TXSB250	FLB1155
