## EXECUTIVE SUMMARY

The Agricultural and Food Policy Center (AFPC) at Texas A&M University develops and maintains data to simulate 95 representative crop, dairy, and livestock operations in major production areas in 28 states. The chief purpose of this analysis is to project the economic viability of those farms by region and commodity for 2013 through 2017. The data necessary to simulate the economic activity of these operations is developed through ongoing cooperation with panels of agricultural producers in selected states. The Food and Agricultural Policy Research Institute (FAPRI) provided projected prices, policy variables, and input inflation rates in their January 2013 Baseline.

Under the January 2013 Baseline, 49 of the 63 crop farms are considered in good liquidity condition (less than a 25 percent chance of negative ending cash by 2017). One crop farm has between a 25 percent and a 50 percent likelihood of negative ending cash, and the remaining 13 crop farms have greater than a 50 percent chance of negative ending cash. Furthermore, 46 of the 63 crop farms are considered in good equity position (less than a 25 percent chance of decreasing real net worth during the study period). Eight crop farms have between a 25 percent and 50 percent likelihood of losing real net worth, and nine crop farms have greater than a 50 percent probability of decreasing real net worth. The following discussion provides an overall evaluation by commodity considering both liquidity and equity measures.

- **FEEDGRAIN FARMS:** Twenty of the 22 feedgrain farms are in good overall financial condition. One is classified in marginal condition, and one is in poor condition.
- **WHEAT FARMS:** All eleven representative wheat farms are classified in good overall financial condition.
- **COTTON FARMS:** Eight of the 16 cotton farms are classified in good condition, three are in marginal condition, and five are in poor condition.
- **RICE FARMS:** Four of the 14 rice farms are projected to be in good financial condition, five are in marginal condition, and five are in poor condition.
- **DAIRY FARMS:** Eleven of the 21 dairies are in good overall financial condition. Ten are classified in marginal condition, and none are in poor condition.
- **BEEF CATTLE RANCHES:** Eight of the 11 cattle ranches are classified in good financial condition, two are in marginal condition, and one is projected to be in poor condition.

## **REPRESENTATIVE FARMS ECONOMIC OUTLOOK FOR THE JANUARY 2013 FAPRI/AFPC BASELINE**

The farm level economic impacts of the FAPRI January 2013 Baseline on representative crop and livestock operations are projected in this report. The analysis was conducted over the 2009-2017 planning horizon using FLIPSIM, AFPC's whole farm simulation model. Data to simulate farming operations in the nation's major production regions came from two sources:

- Producer panel cooperation to develop economic information to describe and simulate representative crop, livestock, and dairy farms.
- Projected prices, policy variables, and input inflation rates from the Food and Agricultural Policy Research Institute (FAPRI) January 2013 Baseline.

The FLIPSIM policy simulation model incorporates the historical risk faced by farmers for prices and production. This report presents the results of the January 2013 Baseline in a risk context using selected simulated probabilities and ranges for annual net cash farm income values. The probability of a farm experiencing negative ending cash reserves and the probability of a farm losing real net worth are included as indicators of the cash flow and equity risks facing farms through the year 2017.

This report is organized into ten sections. The first section summarizes the process used to develop the representative farms and the key assumptions utilized for the farm level analysis. The second section summarizes the FAPRI January 2013 Baseline and the policy and price assumptions used for the representative farm analyses. The third through sixth sections present the results of the simulation analyses for feed grain, wheat, cotton, and rice farms. The seventh and eighth sections summarize simulation results for dairy and cattle. Two appendices constitute the final sections of the report. Appendix A provides tables to summarize the physical and financial characteristics for each of the representative farms. Appendix B provides the names of producers, land grant faculty, and industry leaders who cooperated in the panel interview process to develop the representative farms.

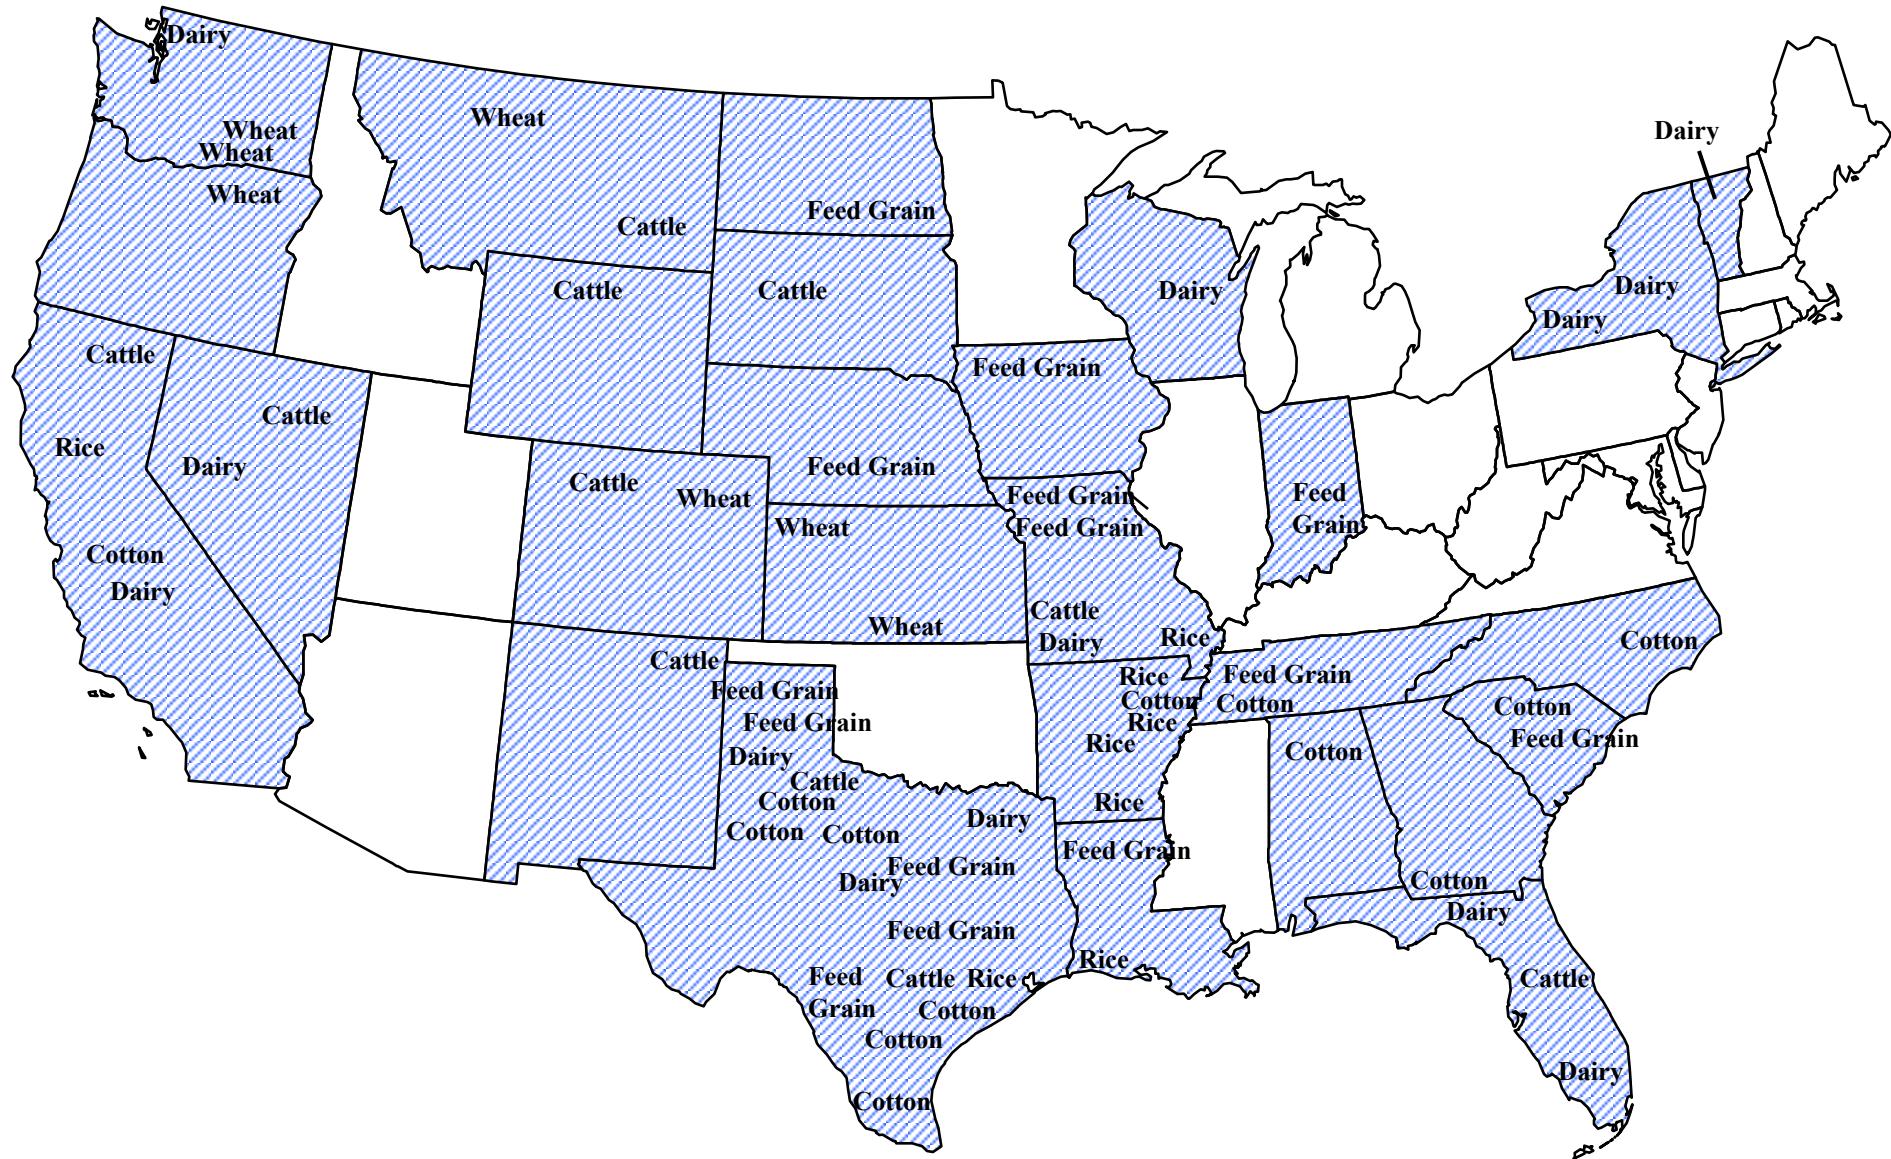

### **Panel Process**

AFPC has developed and maintains data to simulate 95 representative crop farms, dairies, and livestock operations chosen from major production areas across the United States (Figure 7). Characteristics for each of the operations in terms of location, size, crop mix, assets, and average receipts are summarized in Appendix A. The locations of these farms are primarily the results of discussions with staffers for the U.S. House and Senate Agriculture Committees. Information necessary to simulate the economic activity on these representative farms is developed from panels of producers using a consensus-building interview process. Often, two farms are developed in each region using separate panels of producers: one is representative of moderate size full-time farm operations, and the second panel usually represents farms two to three times larger.

The data collected from the panel farms are analyzed using the whole farm simulation model (FLIPSIM) developed by AFPC. The producer panels are provided pro-forma financial statements for their representative farm and are asked to verify the accuracy of simulated results for the past year and the reasonableness of a five-year projection. Each panel must approve the model's ability to reasonably reflect the economic activity on their representative farm prior to using the farm for policy analysis.

All farms used in the analysis have been updated through panel discussions since January 2007, with the majority being updated in the last two years. All of the crop farms are assumed to begin 2009 with 20 percent intermediate-term and long-term debt. Initial debt levels in 2009 for dairy farms were set at 30 percent and initial debt levels for beef cattle ranches were 1 percent for land and 5 percent for cattle and machinery. The debt levels the farms have at the outset of 2009 are based on a stratified tabulation of the ERS-USDA Farm Cost and Returns Survey (using the survey data for moderate to large size farms in states where AFPC has representative farms) and panel member input.

# Figure 1. Representative Farms and Ranches

## **Key Assumptions of Report**

- All farms classified as moderate scale are the size (acres or number of livestock) considered to be representative of a majority of full-time commercial farming operations in the study area. In many regions, a second farm two to three times larger than the moderate scale farm is developed as an indicator of size economies.
- The farm level simulation model incorporates price and yield risk faced by farmers. Historical yield variability for crops and production for livestock (sale weights, birth rates, and milk per cow) over the past ten years are assumed to prevail for the planning horizon. Random crop, livestock, and milk prices are simulated using the January 2013 Baseline by FAPRI as the forecast of average prices. Prices reflect national price volatility caused by international production and demand as well as U.S. production risk.
- Historical crop yields (2009-2012) were held constant based on actual values obtained from the producers. Crop yields for 2013-2017 were simulated stochastically based on the average yields provided by the producers and the historical yield variability for the farm. Prices were held constant at producer-provided values for 2011. FAPRI's January 2013 Baseline prices were localized for the farms and used as the average prices for 2012-2017 to simulate stochastic crop and livestock prices.
- Dairy and beef cattle herd sizes were held constant for all farms over the 2013-2017 planning horizon.
- Starting in 2009, all farms are subject to 4 payment limits on direct payment or counter-cyclical/ACRE payments while loan deficiency payments remain unlimited.
- The farm is subject to owner/operator federal (income and self-employment) and applicable state income taxes as a sole proprietor, based on the current income tax provisions.
- No off-farm income, including family employment, was included in the analyses. Therefore, the farm reflects only the ability of the farm to provide for family living and capital replacement.
- Farm program parameters, average annual prices, crop and livestock yield trends, interest rates, and input cost inflation (deflation) are based on the January 2013 FAPRI Baseline which assumes continuation of the 2008 Farm Bill through 2017.
- Direct payments for participating cotton, wheat, feed grain, oilseed, and rice producers are made based on 85 percent of their historical base acreage times direct payment yield times a direct payment rate in 2008 and 2012-2017. From 2009-2011 the direct payments are based on 83.3 percent of historical base acreage. The direct payment rate is included in the January 2013 FAPRI Baseline.
- Marketing loan provisions for covered commodities were authorized in the 2008 Farm Bill and are assumed to be in place for the farm level analysis.
- ACRE and counter-cyclical payments are triggered by marketing year prices included in the January 2013 FAPRI Baseline.
- The milk support price remains at \$9.90/cwt. through 2017.
- Actual average loan deficiency payment (LDP) rates in the counties where the representative farms are located are used when applicable.
- All crop farms are assumed to carry Multi-Peril Crop Insurance (MPCI), Crop Revenue Coverage (CRC), or Catastrophic coverage (CAT) at levels common to the area.

## FAPRI JANUARY 2013 BASELINE

Projected crop prices for FAPRI's January 2013 Baseline are summarized in Table 1. In general, cotton, corn, wheat, rice, sorghum, and soybean price projections peak in 2012. From 2013-2017 prices return to levels seen in 2009 and 2010. Individual crop prices are projected to move as follows:

- Corn prices are projected to reach a high of \$7.08/bu in 2012. Corn prices are projected to fall to \$5.07/bu in 2013 and settle around \$4.80/bu in the latter projected years.
- Wheat prices increase significantly from 2010-2012 before declining and ending 2017 at \$6.11/bu.
- After reaching a high of \$0.8830/lb. in 2011, cotton prices decline significantly in 2012 before settling around \$0.70/lb for the remainder of the projection period.
- Rice prices reach a peak of \$14.67/cwt. in 2012 before slowly declining and end 2017 at \$14.08/cwt.
- Sorghum prices decline from a high of \$6.93/bu. in 2012, ending the projection period at \$4.64/bu.
- Prices for Soybeans are expected to fall from a high of \$14.20/bu. in 2012 and remain around \$11.00/bu. during the planning horizon.

Assumed loan rates and direct payment rates are reported in Table 1 and reflect the rates authorized in the 2008 Farm Bill. All direct payment rates are assumed to remain constant at 2008 levels for 2009 through 2017.

Projected livestock prices and state and national milk prices for FAPRI's January 2013 Baseline are summarized in Table 2. Feeder cattle prices are generally higher than those reported in the December 2012 Baseline while milk prices saw little change. Cattle and milk prices are projected to move as follows:

- Feeder cattle prices are projected to steadily increase from \$101.89/cwt in 2009 reaching \$172.10/cwt by 2015 and then falling to \$158.94/cwt in 2017.
- Fed cattle prices are expected to increase from the low in 2009 of \$83.25/cwt, ending 2017 at \$126.09/cwt.
- Culled cow prices range between \$47.01/cwt and \$82.93/cwt.
- Milk prices rebounded significantly from a low of \$12.93/cwt in 2009 to \$20.25/cwt in 2011. Milk prices are expected to range from \$19.07/cwt to \$19.51/cwt for the 2013-2017 projection period.

Projected annual rates of change for variable cash expenses are summarized in Table 3. The rates of change in input prices come from FAPRI's January 2013 Baseline. The projected rates of change in costs increase substantially in 2011. Fertilizer prices are projected to increase 36.9 percent in 2011; annual increases ranging from negative 1.3 percent to 3.3 percent are expected throughout the 2013 – 2017 period. Fuel increased 27.5 percent in 2011 after rising 24.0 percent in 2010. Projected annual rates of change in land values over the 2010 – 2017 period were provided by the January 2013 FAPRI Baseline and fall annually from a projected high of 13.1 percent in 2013 to 1.8 percent in 2017.

## Definitions of Variables in the Summary Tables

- **Overall Financial Position, 2013-2017** -- As a means of summarizing the representative farms' economic efficiency, liquidity, and solvency position, AFPC classifies each farm as being in either a good, marginal or poor position. AFPC assumes a farm is in a good financial position when it has less than a 25 percent chance of a negative ending cash balance and a less than 25 percent chance of losing real net worth. If the probabilities of these events are between 25 and 50 percent the farm is classified as marginal. A probability greater than 50 percent places the farm in a poor financial position.
- **Change in Real Net Worth, 2013-2017** -- Annualized percentage change in the operator's net worth from January 1, 2013 through December 31, 2017, after adjusting for inflation. This value reflects the real annualized increase or decrease in net worth or equity for the farm over the planning horizon including changes in real estate values.
- **Net Income Adjustment (NIA) to Maintain Real Net Worth, 2013-2017** -- NIA is the annual change in net cash farm income necessary to insure the farm maintains its real net worth during 2013-2017. A positive NIA indicates the additional annual net income needed to maintain real net worth. A negative NIA indicates the annual loss in net income the farm can endure and still maintain real net worth.
- **Net Income Adjustment (NIA) for Zero Ending Cash Balance in 2017** -- NIA is the loss in annual net cash farm income a farm can withstand and have a zero ending cash balance in 2017. A positive NIA indicates the annual increase in receipts necessary for a zero ending cash balance, while a negative NIA indicates the annual decrease in receipts that results in a zero ending cash balance.
- **Government Payments/Receipts, 2013-2017** -- Sum of all farm program payments (counter-cyclical/ACRE, direct, marketing loan gains/loan deficiency payments, and milk income loss contract (MILC) payments) divided by total receipts received from the market plus counter-cyclical/ACRE, direct, and marketing loan gains/loan deficiency payments, MILC payments, crop insurance indemnities, and other farm related receipts.
- **Total Cash Receipts** -- Sum of annual cash receipts from all sources, including market sales, counter-cyclical/ACRE and direct payments, marketing loan gains/loan deficiency payments, MILC payments, crop insurance indemnities, and other farm related receipts.
- **Government Payments** -- Sum of annual counter-cyclical/ACRE payments, direct payments, and marketing loan gains/loan deficiency payments for crops and the milk income loss contract (MILC) program payment for dairy farms. Also included are lump sum disaster payments for livestock.
- **Net Cash Farm Income** -- Equals total cash receipts minus all cash expenses. Net cash farm income is used to pay family living expenses, principal payments, income taxes, self employment taxes, and machinery replacement costs. The values in the tables are the averages for each year in the planning horizon.
- **Probability of Negative Ending Cash Balance** -- The number of times out of 100 that the farm's ending cash reserves before borrowing are less than zero. This probability is reported for each year to indicate how the cash flow risk for the farm changes over the planning horizon.
- **Ending Cash Reserves** -- Equals total cash on hand at the end of the year. Ending cash equals beginning cash reserves plus net cash farm income and interest earned on cash reserves less principal payments, federal taxes (income and self employment), state income taxes, family living withdrawals, and actual machinery replacement costs (not depreciation).
- **Nominal Net Worth** -- Equity at the end of each year equals total assets including land minus total debt from all sources. Nominal net worth is not adjusted for inflation and averages are reported for each year in the planning horizon.
- **Probability of Decreasing Real Net Worth Over 2009-2017** -- The number of times out of 100 that real net worth at the end of 2017 is less than real net worth at the start of 2009.

**APPENDIX A:**

**CHARACTERISTICS OF**

**REPRESENTATIVE FARMS**

## **2012 CHARACTERISTICS OF PANEL FARMS PRODUCING FEED GRAINS AND OILSEEDS**

- IAG1350** IAG1350 is a 1,350-acre northwestern Iowa (Webster County) grain farm. The farm is moderate-sized for the region and plants 880 acres of corn and 470 acres of soybeans annually. Seventy-three percent of this farm's 2012 receipts come from corn production.
- IAG3400** This 3,400-acre large-sized grain farm is located in northwestern Iowa (Webster County). It plants 2,040 acres of corn and 1,360 acres of soybeans each year, realizing 70 percent of receipts from corn production.
- NEG2400** South central Nebraska (Dawson County) is home to this 2,400-acre grain farm. This farm plants seventy-five percent of cultivated acres to corn and twenty-five percent to soybeans. The farm splits its corn acres evenly between yellow and white food-grade corn. Eighty-one percent of gross receipts are derived from corn sales.
- NEG4300** This is a 4,300-acre grain farm located in south central Nebraska (Dawson County). This operation plants 2,580 acres of corn and 1,290 acres of soybeans each year. Remaining acres are planted to alfalfa. A portion (25 percent) of the corn acreage is food-grade corn. In 2012, 69 percent of total receipts were generated from corn production.
- NDG2500** NDG2500 is a 2,500-acre, moderate-sized, south central North Dakota (Barnes County) grain farm that plants 500 acres of wheat, 500 acres of corn, and 1,500 acres of soybeans. One hundred acres are enrolled in the Conservation Reserve Program. The farm generated 52 percent of 2012 receipts from soybean sales.
- NDG8000** This is an 8,000-acre, large-sized grain farm in south central North Dakota (Barnes County) that grows 4,000 acres of soybeans, 2,450 acres of corn, 1,000 acres of wheat, and 300 acres of sunflowers annually. The remaining acreage is enrolled in the Conservation Reserve Program. Soybean and corn sales accounted for 86 percent of 2012 receipts.
- ING1000** Shelby County, Indiana, is home to this 1,000-acre moderate-sized feedgrain farm. This farm annually plants corn and soybeans in a 50/50 rotation. Due to this farm's proximity to Indianapolis, land development pressures will likely constrain further expansion of this farm's operations. Sixty percent of 2012 receipts came from corn sales.
- ING2200** ING2200 is a large-sized grain farm located in east central Indiana (Shelby County). This farm plants 1,100 acres to corn and 1,100 acres to soybeans each year. In 2012, 59 percent of gross receipts were generated by corn sales.

\*Receipts for 2012 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

\*\*Acreages for 2012 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

## **2012 PANEL FARMS PRODUCING FEED GRAINS AND OILSEEDS**

- MOCG2300** MOCG2300 is a 2,300-acre grain farm located in central Missouri (Carroll County) and plants 1,150 acres of corn and 1,150 acres of soybeans annually. This farm is located in the Missouri River bottom, an area with a large concentration of livestock production. This farm generated 65 percent of its total revenue from corn and 35 percent from soybeans during 2012.
- MOCG4000** This is a 4,000-acre central Missouri (Carroll County) grain farm with 2,000 acres of corn and 2,000 acres of soybeans. This farm is located in the Missouri River bottom, an area with a large concentration of livestock production. Corn sales accounted for 66 percent of farm receipts and soybeans accounted for 34 percent in 2012.
- MONG1850** MONG1850 is a 1,850-acre diversified northwest Missouri grain farm centered in Nodaway County. MONG1850 plants 900 acres of corn, 900 acres of soybeans, and 200 acres of hay annually. The farm also has a 200-head cow-calf herd. Proximity to the Missouri River increases marketing options for area grain farmers due to easily accessible river grain terminals. In 2012, 47 percent of the farm's total receipts were from corn, 35 percent from soybeans, and 15 percent from cattle sales.
- LAG2640** This is a 2,640-acre diversified farm located in north Louisiana (Morehouse Parish). LAC2640 plants 264 acres of cotton and wheat, 1,056 acres of corn, and 1,188 acres of soybeans each year. During 2012, 79 percent of farm receipts were generated from corn and soybean sales.
- LANG2500** This is a 2,500-acre, large-sized northeast Louisiana (Madison Parish) diversified grain farm. This farm harvests 500 acres of rice, 800 acres of soybeans, 250 acres of cotton, and 950 acres of corn. For 2012, 55 percent of farm receipts came from corn and soybean sales.
- TNG900** This is a 900-acre, moderate-sized grain farm in West Tennessee (Henry County). Annually, this farm plants 500 acres of corn, 400 acres of soybeans, and 100 acres of wheat (planted before soybeans) in a region of Tennessee recognized for the high level of implementation of conservation practices by farmers. Sixty-one percent of 2012 farm receipts were from sales of corn.
- TNG2200** West Tennessee (Henry County) is home to this 2,200-acre, large-sized grain farm. Farmers in this part of Tennessee are known for their early and continued adoption of conservation practices, including widespread implementation of no-till farming. TNG2200 plants 1,100 acres of corn, 300 acres of wheat, and 1,100 acres of soybeans (300 of which are double-cropped after wheat). The farm generated 55 percent of its 2012 gross receipts from sales of corn and 37 percent from soybeans.
- SCG3500** A 3,500-acre, large-sized South Carolina (Clarendon County) grain farm with 1,400 acres of corn, 875 acres of cotton, 1,225 acres of wheat, and 1,225 acres of soybeans double-cropped after wheat. The farm generated 33 percent of 2012 receipts from corn sales and 19 percent from soybean sales.

\*Receipts for 2012 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

\*\*Acreages for 2012 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

## **2012 PANEL FARMS PRODUCING FEED GRAINS AND OILSEEDS**

- TXNP3000** This is a 3,000-acre diversified grain farm located on the northern High Plains of Texas (Moore County). This farm plants 630 acres of cotton, 960 acres of irrigated corn, 240 acres of irrigated sorghum for seed production, and 870 acres of irrigated wheat annually. Forty-eight percent of total receipts are generated from corn sales.
- TXNP8000** TXNP8000 is a large-sized diversified grain farm located in the northern Texas Panhandle (Moore County). This farm annually plants 1,872 acres of irrigated cotton, 3,120 acres of irrigated corn, 867 acres of sorghum (587 acres of dryland and 280 acres of irrigated production for seed), and 1,555 acres of winter wheat (968 acres irrigated and 587 acres dryland). Fifty-six percent of 2012 cash receipts were derived from corn sales.
- TXPC2500** The Texas Panhandle is home to this 2,500-acre farm (Deaf Smith County). Annually, wheat is planted on 1,242 acres (875 irrigated and 327 dryland), 875 acres planted to irrigated corn, 200 irrigated acres are planted to cotton, and grain sorghum is planted on 183 dryland acres. Sixty-four percent of 2012 cash receipts were generated by corn sales.
- TXHG2500** This 2,500-acre grain farm is located on the Blackland Prairie of Texas (Hill County). On this farm, 800 acres of corn, 900 acres of sorghum, 300 acres of cotton, and 500 acres of wheat are planted annually. Grain sales accounted for 78 percent of 2012 receipts with cotton accounting for 19 percent of sales. Forty beef cows live on 300 acres of improved pasture and contribute approximately four percent of total receipts.
- TXWG1600** This 1,600-acre farm is located on the Blackland Prairie of Texas (Williamson County). TXWG1600 plants 750 acres of corn, 300 acres of sorghum, 400 acres of cotton, and 150 acres of winter wheat annually. Additionally, this farm has a 40-head beef cow herd that is pastured on rented ground that cannot be farmed. Grain sales accounted for 61 percent of 2012 receipts with cotton accounting for 35 percent of sales.
- TXUG1200** TXUG1200 is a grain farm located in Uvalde County, Texas. This farm plants 500 acres of corn, 300 acres of cotton, 250 acres of grain sorghum, and 150 acres of wheat each year. All crops except wheat are grown under irrigation. In 2012, feed grain sales accounted for 55 percent of farm receipts.

## 2012 CHARACTERISTICS OF PANEL FARMS PRODUCING WHEAT

- WAW1725** This is a 1,725-acre moderate-sized grain farm in the Palouse of southeastern Washington (Whitman County). It plants 1,147 acres of wheat, 120 acres of barley, and 458 acres of dry peas. Disease concerns dictate rotating a minimum acreage of barley and peas to maintain wheat yields. This farm generated 80 percent of 2012 receipts from wheat.
- WAW5500** A 5,500-acre, large-sized grain farm in the Palouse of southeastern Washington (Whitman County). Annually, this farm allocates 3,055 acres to wheat, 611 acres to barley, and 1,204 acres to dry peas. Diseases that inhibit wheat yield dictate the rotation of a minimum acreage of barley and peas. Wheat sales accounted for 75 percent of 2012 receipts.
- WAAW3500** South central Washington (Adams County) is home to this 3,500-acre, large-sized grain farm. Annually, this farm plants 1,500 acres of wheat in a wheat-fallow rotation. Additionally, 500 acres are enrolled in CRP. In 2012, 96 percent of the farm's income came from wheat.
- ORW3600** ORW3600 is a 3,600-acre large-sized grain farm located in northeastern Oregon (Morrow County). This farm plants 1,600 acres annually in a wheat-fallow rotation, with 400 additional acres enrolled in a CRP contract. Ninety-five percent of this farm's 2012 total receipts came from wheat sales.
- MTW4500** North-central Montana (Chouteau County) is home to this 4,500 acre farm on which 2,330 acres of wheat (1,711 acres of winter wheat, 619 acres of spring wheat) are planted each year. MTW4500 uses no-till production practices. In 2012, 98 percent of cash income came from wheat.
- COW3000** A 3,000-acre northeast Colorado (Washington County), moderate-sized farm that plants 970 acres of winter wheat, 905 acres of millet, and 500 acres of corn each year. COW3000 has adopted minimum tillage practices on most of its acres. This farm generated 36 percent of its receipts from wheat, 35 percent from millet, and 27 percent from corn.
- COW5640** A 5,640-acre, large-sized northeast Colorado (Washington County) wheat farm. It plants 1,900 acres of wheat, 890 acres of millet, and 890 acres of corn. During 2012, 55 percent of gross receipts came from wheat sales and 24 percent came from corn sales.
- KSCW2000** South central Kansas (Sumner County) is home to this 2,000-acre, moderate-sized grain farm. KSCW2000 plants 1,200 acres of winter wheat, 400 acres of soybeans, 200 acres of sorghum, and 200 acres of corn each year. For 2012, 54 percent of gross receipts came from wheat.
- KSCW4500** A 4,500-acre, large-sized grain farm in south central Kansas (Sumner County) that plants 2,700 acres of winter wheat, 675 acres of corn, 675 acres of soybeans, and 450 acres of sorghum. Fifty-five percent of this farm's 2012 total receipts were generated from sales of winter wheat.
- KSNW4000** This is a 4,000-acre, moderate-sized northwest Kansas (Thomas County) grain farm. This farm plants 1,500 acres of winter wheat (wheat-fallow rotation), 1,000 acres of corn, and 500 acres of sorghum. KSNW4000 also owns 80 head of beef cows. This farm generated 39 percent of 2012 receipts from wheat, 54 percent of its receipts from feedgrains, and 7 percent from cattle.
- KSNW5500** KSNW5500 is a 5,500-acre, large-sized northwest Kansas (Thomas County) grain farm that annually plants 1,820 acres of winter wheat, 2,050 acres of corn, 500 acres of sorghum, and 130 acres of soybeans. This farm also runs 100 head of beef cows. The farm generated 25 percent of receipts from wheat and 69 percent from feedgrains during 2012.

\*Receipts for 2012 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

\*\*Acreages for 2012 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

## **2012 CHARACTERISTICS OF PANEL FARMS PRODUCING COTTON**

- TXSP2500** A 2,500-acre Texas South Plains (Dawson County) cotton farm that is moderate-sized for the area. TXSP2500 plants 2,275 acres of cotton (1,800 dryland, 475 irrigated). For 2012, 100 percent of receipts came from cotton.
- TXSP4500** The Texas South Plains (Dawson County) is home to this 4,500-acre, large-sized cotton farm that grows 4,047 acres of cotton (2,667 dryland, 1,380 irrigated) and 120 acres of wheat. Cotton sales comprised 98 percent of 2012 receipts.
- TXEC5000** This 5,000-acre farm is located on the Eastern Caprock of the Texas South Plains (Crosby County). Annually, 3,650 acres are planted to cotton (2,650 irrigated and 1,000 dryland), 550 acres of sorghum (250 irrigated and 300 dryland), and 300 acres of dryland wheat. In 2012, cotton sales accounted for 94 percent of gross receipts.
- TXRP2500** TXRP2500 is a 2,500-acre cotton farm located in the Rolling Plains of Texas (Jones County). This farm plants 1,000 acres of cotton and 1,000 acres of winter wheat each year. The area is limited by rainfall, and the farm uses a conservative level of inputs. Seventy-five percent of 2012 farm receipts came from cotton sales. Twenty-five head of beef cows generated three percent of farm receipts.
- TXMC1800** This 1,800-acre cotton farm is located on the Coastal Plain of southeast Texas (Wharton County). TXMC1800 farms 300 acres of sorghum, 900 acres of cotton, and 600 acres of corn. In 2012, cotton sales comprised 57 percent of total cash receipts on this operation.
- TXCB2250** A 2,250-acre cotton farm located on the Texas Coastal Bend (San Patricio County) that farms 1,250 acres of cotton, 1,125 acres of sorghum, and 125 acres of corn annually. Sixty-five percent of 2012 cash receipts were generated by cotton.
- TXCB8000** Nueces County, Texas is home to this 8,000-acre farm. Annually, 4,000 acres are planted to cotton and 4,000 acres to sorghum. Cotton sales accounted for 60 percent of 2012 receipts.
- TXVC4500** This 4,500-acre farm is located in the lower Rio Grande Valley of Texas (Willacy County) and plants 1,495 acres to cotton (500 irrigated and 995 acres dryland), 2,780 acres to sorghum, and 225 acres of sugarcane. In 2012, 42 percent of TXVC4500's cash receipts were generated by cotton sales.

## **2012 CHARACTERISTICS OF PANEL FARMS PRODUCING COTTON**

- CAC4000** A 4,000-acre cotton farm located in Kings County, California, CAC4000 plants 1,333 acres to cotton, 267 acres to hay, 2666 acres of silage, and harvests 400 acres of almonds. Thirty-two percent of 2012 receipts came from cotton sales.
- ARNC5000** Far northeast Arkansas (Mississippi County) is home to this 5,000-acre cotton farm. ARNC5000 plants all its acres to cotton annually, generating 100 percent of its receipts from cotton.
- TNC2100** A 2,100-acre, moderate-sized West Tennessee (Fayette County) cotton farm. TNC2100 consists of 525 acres of cotton, 1,020 acres of soybeans, 525 acres of corn, and 30 acres enrolled in CRP. Cotton accounted for 38 percent of 2012 gross receipts, with corn and soybeans contributing 26 percent and 36 percent, respectively.
- TNC4050** TNC4050 is a 4,050-acre, large-sized West Tennessee (Haywood County) cotton farm. This farm plants 2,025 acres of cotton, 1,425 acres of soybeans, 600 acres of corn, and 475 acres of wheat each year. During 2012, cotton sales generated 62 percent of gross receipts.
- ALC3000** A 3,000-acre cotton farm located in northern Alabama (Lawrence County) that plants 1,050 acres to cotton, 1,350 acres to corn, 600 acres of soybeans and 450 acres to wheat annually. This farm was early to adopt no-till cropping practices. Cotton sales accounted for 44 percent of total farm receipts during 2012.
- GAC2300** Southwest Georgia (Decatur County) is home to a 2,300-acre cotton farm that plants 1,200 acres to cotton, 550 acres to peanuts, and 550 acres to corn. In 2012, farm receipts were comprised of cotton sales (47 percent), corn (22 percent), and peanut sales (28 percent).
- SCC1800** SCC1800 is a moderate-sized, 1,800-acre grain farm in South Carolina (Barnwell County) consisting of 360 acres of corn, 900 acres of cotton, 360 acres of peanuts, 180 acres of soybeans (double cropped behind wheat), and 180 acres of wheat. Fifty-one percent of the farm's receipts were from cotton sales during 2012.
- NCC1500** This is a 1,500-acre cotton farm located on the upper coastal plain of North Carolina (Wayne County). NCC1500 plants 225 acres of cotton, 255 acres of wheat, 850 acres of soybeans, and 275 acres of corn annually. Cotton accounted for 19 percent of this farm's 2012 receipts.

## **2012 CHARACTERISTICS OF PANEL FARMS PRODUCING RICE**

- CAR550** CAR550 is a 550-acre moderate-sized rice farm in the Sacramento Valley of California (Sutter and Yuba Counties) that plants 500 acres of rice annually. This farm generated 100 percent of 2012 gross receipts from rice sales.
- CAR3000** This is a 3,000-acre rice farm located in the Sacramento Valley of California (Sutter and Yuba Counties) that is large-sized for the region. CAR3000 plants 3,000 acres of rice annually. One hundred percent of 2012 total receipts were generated from rice sales.
- CABR1300** The Sacramento Valley (Butte County) is home to CABR1300, a 1,300-acre rice farm. CABR1300 harvests 1,200 acres of rice annually, generating 100 percent of 2012 farm receipts from rice sales.
- CACR800** CACR800 is a 800-acre rice farm located in the Sacramento Valley of California (Colusa County). This farm harvests 800 acres of rice each year. During 2012, 100 percent of farm receipts were realized from rice sales.
- TXR1500** This 1,500-acre rice farm located west of Houston, Texas (Colorado County) is moderate-sized for the region. TXR1500 harvests 600 acres of rice. The farm generated 79 percent of its receipts from rice during 2012.
- TXR3000** TXR3000 is a 3,000-acre, large-sized rice farm located west of Houston, Texas (Colorado County). This farm harvests 1,200 acres of rice annually. TXR3000 realized 15 percent of 2012 gross receipts from rice sales. Due to limited water allowances in 2012, the farm was not able to plant all of their intended acres of rice and received prevented planting crop insurance indemnities for those acres.
- TXBR1800** The Texas Gulf Coast (Matagorda County) is home to this 1,800-acre rice farm. TXBR1800 plants a third of its acres to rice annually and fallows the remainder. In 2012, TXBR1800 realized 100 percent farm receipts from rice sales.
- TXER3200** This 3,200-acre rice farm is located in the Texas Gulf Coast (Wharton County). TXER3200 harvests 1,067 acres of rice each year. The farm also grows 320 acres of soybeans and 747 acres of grain sorghum annually. Seventy-nine percent of 2012 receipts came from rice sales.

Appendix Table A7. Characteristics of Panel Farms Producing Rice.

\*Receipts for 2012 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

\*\*Acreages for 2012 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

## **2012 CHARACTERISTICS OF PANEL FARMS PRODUCING RICE**

- LASR1480** A 1,480-acre southwest Louisiana (Acadia, Jeff Davis, and Vermilion parishes) rice farm, LASR1480 is moderate-sized for the area. This farm harvests 800 acres of rice and 530 acres of soybeans. During 2012, 75 percent of gross receipts were generated from rice sales.
- ARMR7500** ARMR7500 is a 7,500-acre diversified rice farm in southeast Arkansas (Desha County) that plants 1,875 acres of rice, 2,375 acres of soybeans (750 double cropped behind wheat), 1,500 acres of cotton, 1,500 acres of corn, and 1,000 acres of wheat. For 2012, 29 percent of gross receipts came from rice sales, 29 percent from cotton sales, 19 percent from corn sales, and 18 percent from soybean sales.
- ARSR3240** ARSR3240 is a 3,240-acre, large-sized Arkansas (Arkansas County) rice farm that harvests 1,620 acres of rice, 1,620 acres of soybeans, and 324 acres of wheat (planted before soybeans) each year. Sixty-six percent of this farm's 2012 receipts came from rice sales.
- ARWR1400** East central Arkansas (Cross County) is home to this 1,400-acre rice farm. Moderate-sized for the region, ARWR1400 annually plants 700 acres each to rice and soybeans. During 2012, rice sales generated 66 percent of gross receipts.
- ARHR3000** ARHR3000 is a 3,000-acre large-sized northeast Arkansas (Lawrence County) rice farm that annually harvests 1,450 acres of rice, 1,250 acres of soybeans, and 300 acres of corn. Rice sales accounted for 74 percent of 2012 farm receipts.
- MOWR4000** A 4,000-acre rice farm located in southeast Missouri (Butler County), MOWR4000 is large-sized for the region. Annually, this farm plants 2,000 acres of rice and 2,000 acres of soybeans. Sixty-four percent of receipts for this farm came from rice sales in 2012.

## **2012 CHARACTERISTICS OF PANEL FARMS PRODUCING MILK**

- CAD1710** A 1,710-cow, large-sized central California (Tulare County) dairy, the farm plants 1,200 acres of hay/silage for which it employs custom harvesting. Milk sales generated 92 percent of 2012 total receipts.
- WAD250** A 250-cow, moderate-sized northern Washington (Whatcom County) dairy. This farm plants 200 acres of silage and generated 95 percent of its 2012 gross receipts from milk sales.
- WAD850** An 850-cow, large-sized northern Washington (Whatcom County) dairy. This farm plants 605 acres for silage annually. During 2012, 94 percent of this farm's gross receipts came from milk.
- IDD3000** A 3,000-cow, large-sized dairy located in the Magic Valley of Idaho (Twin Falls County). This farm plants 1,250 acres of corn silage annually. Milk sales account for 93 percent of 2012 gross receipts.
- NVD500** A 500-cow, moderate-sized Nevada (Churchill County) dairy. This farm plants 150 acres of hay and 100 acres of corn silage annually. Milk sales accounted for 91 percent of NVD500's gross receipts for 2012.
- TXND3000** A 3,000-cow, large-sized dairy located in the South Plains of Texas (Bailey County). This farm plants 1,440 acres of corn silage annually. Milk sales account for 92 percent of 2012 gross receipts.
- TXCD700** A 700-cow, moderate-sized central Texas (Erath County) dairy, TXCD700 plants 1,400 acres of hay each year. Milk sales represented 93 percent of this farm's 2012 gross receipts.
- TXCD1300** A 1,300-cow, large-sized central Texas (Erath County) dairy, TXCD1300 plants 680 acres of silage and 440 acres of hay annually. During 2012, milk sales accounted for 91 percent of receipts.

## **2012 CHARACTERISTICS OF PANEL FARMS PRODUCING MILK (continued)**

- TXED400** A 400-cow, moderate-sized northeast Texas (Hopkins County) dairy. This farm has 400 acres of silage and 125 acres of hay. During 2012, milk sales represented 81 percent of annual receipts.
- WID145** A 145-cow, moderate-sized eastern Wisconsin (Winnebago County) dairy, the farm plants 180 acres of silage, 90 acres for hay, 150 acres of corn, and 130 acres of soybeans. Milk constituted 80 percent of this farm's 2012 receipts.
- WID1000** A 1000-cow, large-sized eastern Wisconsin (Winnebago County) dairy, the farm plants 600 acres of hay, 600 acres of silage, 600 acres of corn and 100 acres of soybeans each year. Milk sales comprised 91 percent of the farm's 2012 receipts.
- NYWD600** A 600-cow, moderate-sized western New York (Wyoming County) dairy. This farm plants 600 acres of silage, 450 acres of haylage, 100 acres of corn, and 50 acres of hay annually. Milk sales accounted for 88 percent of the gross receipts for this farm in 2012.
- NYWD1200** A 1,200-cow, large-sized western New York (Wyoming County) dairy. This farm plants 1,900 acres of silage and 200 acres of corn annually. Milk sales accounted for 90 percent of the gross receipts for this farm in 2012.
- NYCD110** A 110-cow, moderate-sized central New York (Cayuga County) dairy, the farm plants 30 acres for hay, 90 acres for corn, and 185 acres for silage annually. Milk accounted for 88 percent of the gross receipts for 2012 on this dairy.
- NYCD550** A 550-cow, large-sized central New York (Cayuga County) dairy, this farm plants 625 acres of hay and haylage and 475 acres of silage. Milk sales make up 91 percent of the 2012 total receipts for this dairy.

\*Receipts for 2012 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

\*\*Acreages for 2012 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

## **2012 CHARACTERISTICS OF PANEL FARMS PRODUCING MILK (continued)**

- VTD140** A 140-cow, moderate-sized Vermont (Washington County) dairy. VTD140 plants 60 acres of hay and 160 acres of silage annually. Milk accounted for 88 percent of the 2012 receipts for this farm.
- VTD400** A 400-cow, large-sized Vermont (Washington County) dairy. This farm plants 100 acres of hay and 850 acres of silage annually. Milk sales represent 91 percent of VTD400's gross receipts in 2012.
- MOGD550** A 550-cow, grazing dairy in southwest Missouri (Dade County), the farm grazes cows on 520 acres of improved pasture. Milk accounted for 89 percent of gross farm receipts for 2012.
- MOGD180** A 180-cow, grazing dairy in southwest Missouri (Dade County), the farm grazes cows on 265 acres of improved pasture. Milk accounted for 88 percent of gross farm receipts for 2012.
- FLND550** A 550-cow, moderate-sized north Florida (Lafayette County) dairy. The dairy grows 130 acres of hay each year. All other feed requirements are purchased in a pre-mixed ration. Milk sales accounted for 91 percent of the farm receipts.
- FLSD1500** A 1,500-cow, large-sized south central Florida (Okeechobee County) dairy, FLSD1500 plants 100 acres of hay and 400 acres of silage annually. Milk sales represent 93 percent of 2012 total receipts.

## **2012 CHARACTERISTICS OF PANEL RANCHES PRODUCING BEEF CATTLE**

- CAB500** Located in the northern Sacramento Valley (Tehama County, California), this 500-cow operation covers 10,000 acres of deeded and privately owned leased range. Additionally, 2,000 AUMs are leased from the federal government. All 2012 receipts were generated by the cow-calf operation.
- NVB700** NVB700 is a 700-cow ranch located in northeastern Nevada (Elko County). The operation consists of 1,300 acres of owned hay meadow and 8,725 acres of owned range, supplemented by 4,450 AUMs leased from the U.S. Forest Service. Each year, the ranch harvests 975 acres of hay. Annually, cattle sales represent all of the ranch's receipts.
- MTB500** A 500-cow ranch located on the eastern plains of Montana (Custer County), MTB500 runs cows on a combination of owned land and land leased from federal, state, and private sources. Federal land satisfies one quarter of total grazing needs. The ranch owns 14,000 acres of pasture. 640 acres of hay are produced annually on the owned land. Also, all deeded acres are leased for hunting. Cattle sales represented 98 percent of this ranch's 2012 receipts.
- WYB435** This 435-cow ranch is located in north central Wyoming (Washakie County). The ranch leases 2000 AUMs from the U.S. Forest Service and owns 1,000 acres of range. In response to drought, the ranch has begun leasing 700 acres of private pasture. Annually, the ranch harvests 305 acres of alfalfa and grass hay on owned ground. The ranch backgrounds two-thirds of its calves for ninety days. In 2012, cattle sales accounted for 92 percent of gross receipts, while hay sales accounted for seven percent.
- COB250** This 250-cow ranch is located in northwestern Colorado (Routt County). Federal land provides seven percent of the ranch's grazing needs. The ranch owns 2,300 acres of rangeland, and the cattle graze federal land during the summer. COB250 harvests 450 acres of hay each year at a projected yield of 2.5 tons per acre. Cattle sales accounted for 73 percent of the ranch's 2012 total receipts.
- NMB160** NMB160 is a 160-cow ranch located in northeastern New Mexico (Union County). In 2011, this ranch liquidated 33 percent of its mature cowherd in response to oppressive drought, culling 80 of its 240. During 2012, 94 percent of gross receipts were derived from cattle sales with the balance of receipts generated from fee hunting.

## **2012 CHARACTERISTICS OF PANEL RANCHES PRODUCING BEEF CATTLE (continued)**

- SDB375** SDB375 is a 375-cow West River (Meade County, South Dakota) beef cattle ranch. This operation produces hay on 1,150 acres of owned cropland, and runs its cows on 6,700 acres of owned native range. In 2012, calf and culled cow/bull sales accounted for 100 percent of gross receipts.
- MOB250** A 250-cow beef cattle operation is the focal point of this diversified livestock and crop farm located in southwest Missouri (Dade County). MOB250 plants 120 acres of corn, 120 acres of wheat, 160 acres of soybeans, and 280 acres of hay. Improved pasture makes up another 570 acres of this ranch. During 2012, cattle sales comprised 50 percent of gross receipts.
- TXRB500** The western Rolling Plains of Texas (King County) is home to this 500-head cow-calf operation. This ranch operates on 20,000 acres (half owned, half leased) of native range. After weaning, calves are placed on wheat pasture and then either sold as feeder cattle or retained as replacement females. Eighty-six percent of 2012 receipts came from cattle sales, while 14 percent came from fee hunting.
- TXSB200** A 200-head cow-calf operation is the central focus of this full-time agricultural operation in south central Texas (Gonzales County). Faced with continued drought, the ranch has been able to only slightly rebuild its numbers from its 30 percent liquidation in 2006. Contract broiler production is an important source of agricultural revenue for this ranch; even so, cattle sales accounted for 84 percent of 2012 gross receipts.
- FLB1155** This is a 1,155-cow ranch located in central Florida (Osceola County). FLB1155 runs cows on 5,400 acres of owned improved pasture, from which 3,560 acres of hay are harvested annually. Sales of sod are a burgeoning source of agricultural income for area ranches. During 2012, cattle sales represented 89 percent of total receipts.
- OTHERS** Seven other representative farms have beef cattle operations along with their crop production (MONG1850, TXHG2000, TXWG1600, KSNW4000, KSNW5500, TXRP2500, and GAC2300). These farming operations have from 25 to 200 cows. Cattle contributed from 3 to 13 percent of gross receipts for these farms in 2012.
